CONFIDENTIAL · SUBJECT-COMPANY INTELLIGENCE

Occidental Petroleum OXY — infrastructure for a hyperscale data-center JV

An assessment of Occidental's power, water, gas/CO_2 and carbon-capture infrastructure across West Texas and the Permian Basin — framed for a potential joint venture with the Williams family to co-develop a hyperscale data-center campus near Caramba North, Pecos County.

Prepared June 2026
Subject company: Occidental Petroleum Corp. (NYSE: OXY)
Audience: data-center JV evaluation
Sources: SEC filings & earnings calls · OXY / WES / 1PointFive / NET Power releases · DOE / EPA / EIA / RRC / TCEQ · trade press — see Appendix D

Executive summary

Occidental as a data-center JV partner

Occidental is the Permian's largest CO_2 and enhanced-oil-recovery operator, and over five years it has quietly assembled the three things a hyperscale data center needs most — **dispatchable power, large-scale water handling, and carbon management.**

POWER

NET Power builds gas plants that capture nearly all their own CO_2 — firm, 24/7, behind-the-meter power that **skips the multi-year ERCOT grid queue**. OXY also has 265 MW of solar advancing and a 453 MW NET Power-affiliated gas project in the Midland queue.

WATER

One of the larger **produced-water and recycling networks** in private hands, plus a working desalination pilot — a path to cooling water that doesn't draw down scarce West-Texas freshwater.

CARBON

STRATOS, the **world's largest direct-air-capture plant**, plus permanent CO_2 storage at scale — a turnkey route to credible carbon-neutral claims for gas-fired power.

Proximity to Caramba North: OXY's nearest major assets are the Century CO_2 plant (~31 miles) and Block 31 (~48 miles); the rest of its footprint sits 90–130 miles north. The deeper fit is OXY's power-and-carbon platform — **capabilities and contracts more than pipe within sight of the property.**

Contents

Key personnel

David Woest[26] DIRECTOR, SURFACE LAND — OXY

Leads OXY's surface-land function (surface-use agreements, rights-of-way, easements, landowner relations) out of Katy, Texas. Independently confirmed in 2019 Texas Legislature records testifying for OXY on eminent-domain / right-of-way reform — squarely the surface-land remit a landowner negotiation would touch.

John Cranfill[27] SR. DIRECTOR, BUSINESS DEVELOPMENT — US ONSHORE & CARBON MANAGEMENT, OXY

Houston-based; ~16 years' experience. His mandate is securing CO_2 supply/off-take agreements and optimizing OXY's upstream portfolio — the commercial bridge between conventional oil & gas and the carbon-management business. Petroleum-engineering background (UT Austin) with a CCUS certificate (U. Houston).

Jeffrey "Jeff" Noto[28] LAND TEAM LEAD — OXY

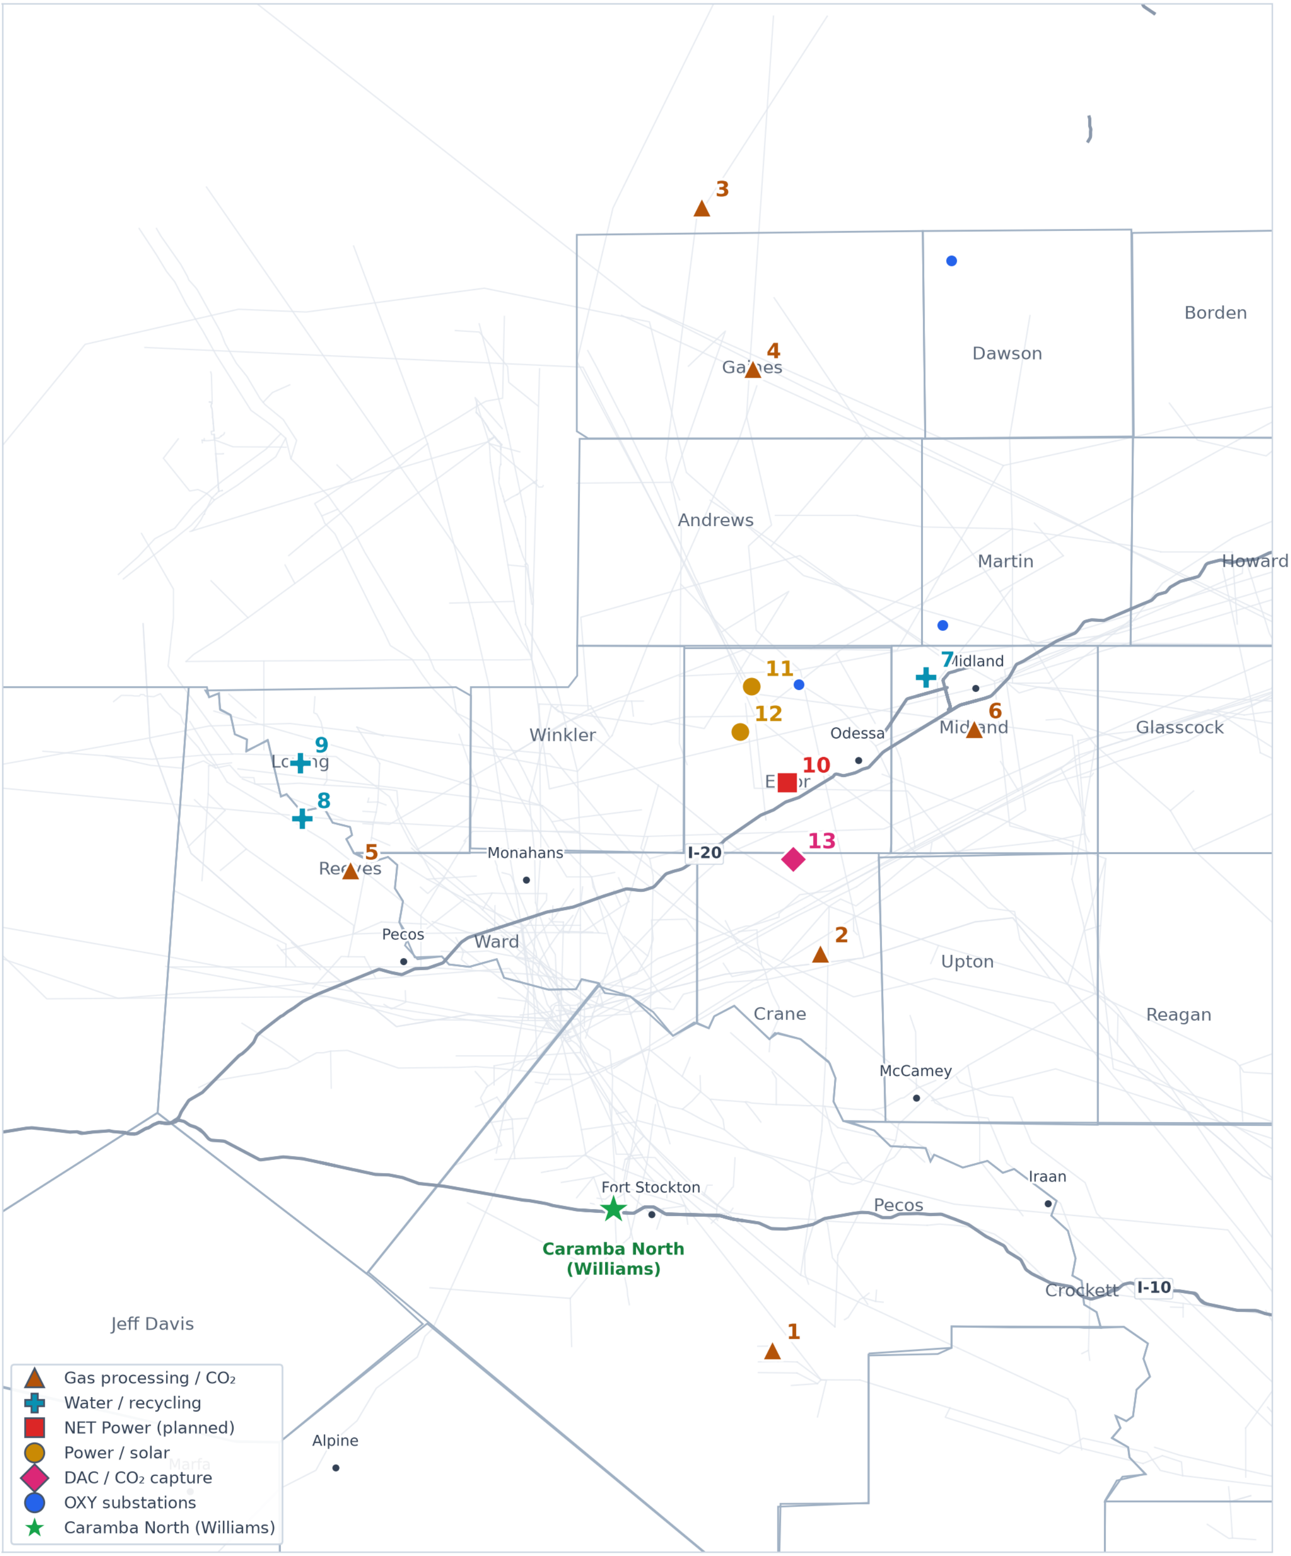
Leads negotiation and administration of OXY's oil-, gas- and carbon-storage property rights — leasing, surface/subsurface agreements, title and regulatory coordination. Previously a senior land negotiator at OXY's Low-Carbon Ventures, tied to its CO_2-storage land assembly. (The Greater-Houston OXY professional — not the telecom CFO of the same name.)

Section 1

OXY's footprint & proximity to Caramba North

For a hyperscale data center, what sits nearby in energy infrastructure decides how fast and how cheaply it can be powered, cooled and connected. This section maps OXY's physical footprint across West Texas and shows what lies within reach of the Williams family's Caramba North tract in Pecos County — the starting point for judging whether OXY's assets are close enough to be additive to a jointly-developed campus.

OXY infrastructure across the Permian / West Texas



Counties & roads: Census TIGER · pipelines (context): HIFLD/EIA · OXY assets: OXY filings + public facility databases

All OXY-owned and affiliated (Western Midstream) assets across the Permian, shown relative to Caramba North (green star). Substations (blue) for orientation.

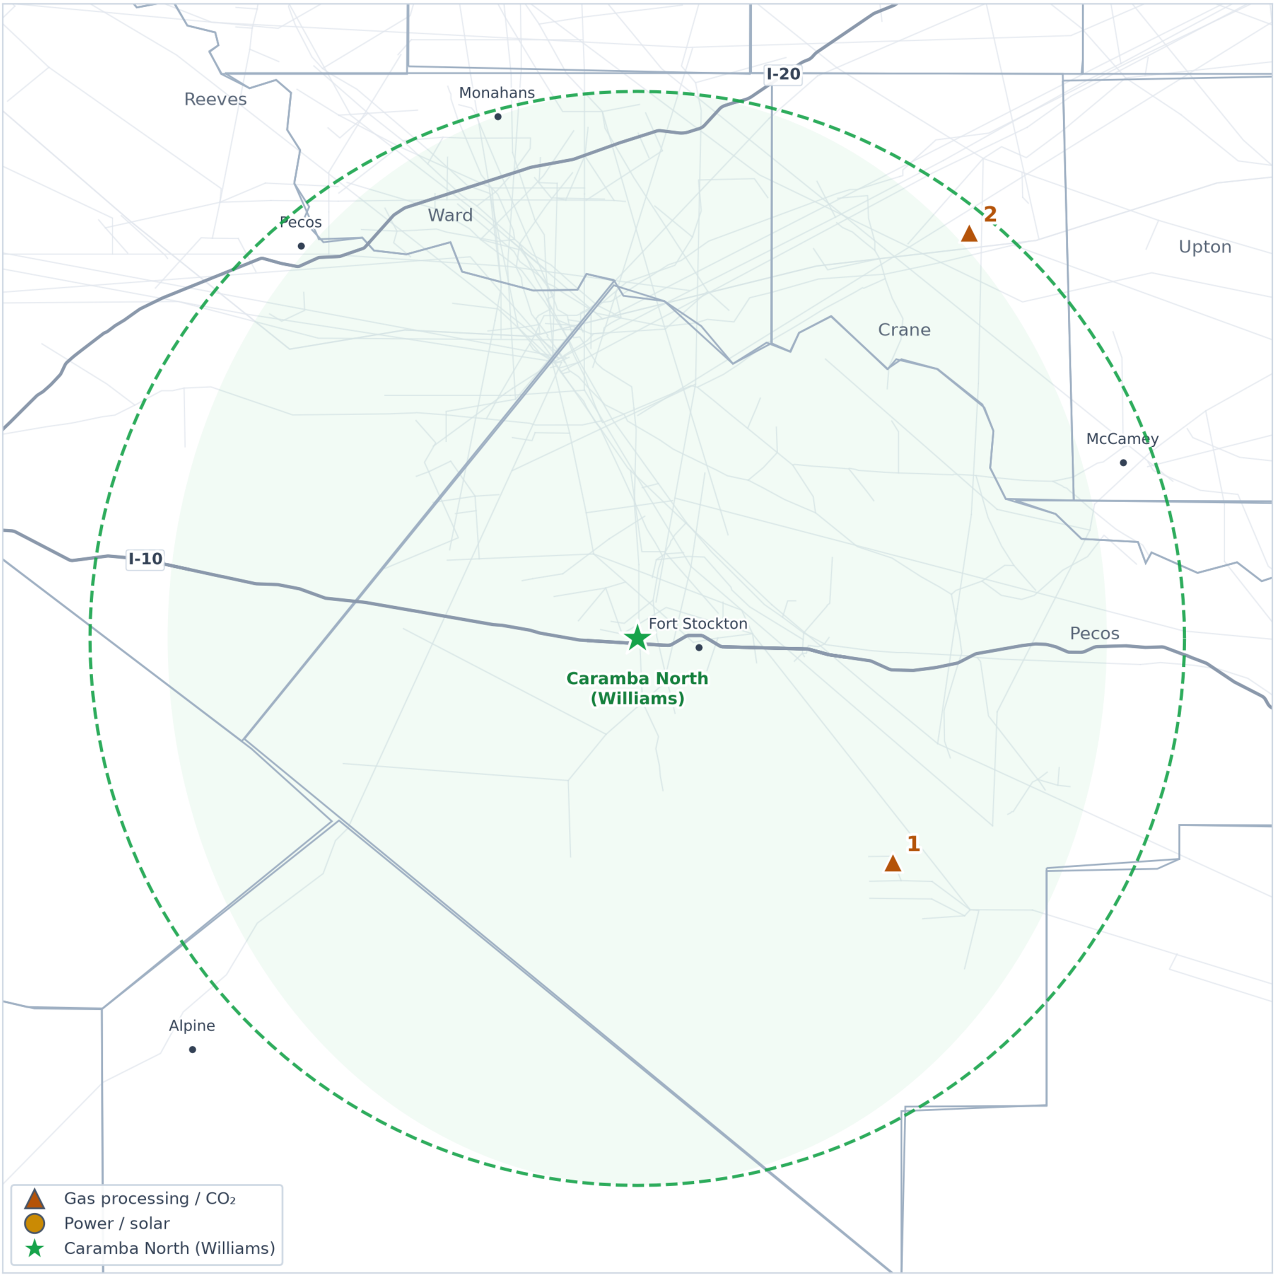
1 Century plant (Pecos) · Gas / CO_2
2 Block 31 (Crane) · Gas / CO_2
3 Wasson CO_2-EOR · Gas / CO_2
4 Denver City hub · Gas / CO_2
5 WES DBM processing · Gas / CO_2
6 Athena plant (2026) · Gas / CO_2
7 S. Curtis Ranch recycle · Water
8 WES desal pilot · Water
9 Pathfinder PW (2027) · Water
10 NET Power (Ector) · NET Power
11 Goldsmith Solar 16 MW · Power / solar
12 STRATOS solar · Power / solar
13 STRATOS DAC (Ector) · Carbon capture

What is actually near the Williams land

THE PROXIMITY READ

OXY's two nearest major assets to Caramba North are the **Century gas & CO_2 plant (~31 miles)** and the **Block 31 CO_2-flood complex (~48 miles)**, both shown below. The rest of OXY's footprint — its largest CO_2 field (Wasson), its gas-processing plants, and its power and carbon-capture projects around Odessa — sits 90–130 miles north in the Midland Basin and the Gaines/Yoakum CO_2 corridor. The practical conclusion: physical adjacency to the Williams tract is limited to OXY's CO_2 system, while the assets most relevant to a data center (power and water) are a basin away. The strategic fit, developed in the following sections, is therefore about OXY's **capabilities and contracts**, not its pipe within sight of the property.

OXY assets within 50 miles of Caramba North



Counties & roads: Census TIGER · pipelines (context): HIFLD/EIA · OXY assets: OXY filings + public facility databases

OXY assets with a precise location within 50 miles of Caramba North; county-level assets are excluded here to avoid implying false nearness.

1. Century plant (Pecos) · Gas / CO_2
2. Block 31 (Crane) · Gas / CO_2

Section 2

OXY in the public databases — ERCOT queue, generation & air permits

The map is built on public databases — the ERCOT interconnection queue, EIA's generation inventory, and Texas air-permit records — and they show what OXY has actually **filed to build, generate and emit**. For a data-center JV these are leading indicators: the queue shows where OXY is trying to add power; the permits show the carbon and air footprint a partner would work alongside. Two records stand out — a **453 MW NET Power-affiliated gas project in Midland's queue** (far larger than the re-scoped 80 MW Odessa plant) and **265 MW of OXY solar** already advancing toward interconnection.[1]

ERCOT interconnection queue — OXY & affiliated filings

PROJECT	MW	TYPE	COUNTY / ZONE	FILING ENTITY	QUEUE STATUS	INR
TRIFECTA Gas	453	Gas turbine	Midland / West	NET Power Canaveral, LLC	No IA yet	26INR0183
Santa Garcias Solar	265	Solar PV	Kleberg / Coastal	Oxy Renewable Energy, LLC	IA / facilities study pending	26INR0143
Titus Low-Carbon Ventures Solar 1	338	Solar PV	San Patricio / Coastal	Vaquero Solar, LLC	No IA yet	26INR0211
NET Power Demonstration plant	25.5	Gas turbine	Harris / Houston	NET Power, LLC	No IA yet	26INR0345

Why TRIFECTA matters: a 453 MW gas filing under "NET Power Canaveral" is the largest single OXY-linked power project in the Texas queue — evidence the gas-with-built-in-capture model is being pursued at utility scale well beyond the 80 MW Odessa plant. It is the most direct read on OXY's appetite for exactly the firm, low-emission power a hyperscale campus needs.

Operating & recently-divested generation (EIA-860)

PLANT	MW	TYPE	COUNTY	OPERATOR	ONLINE	EIA CODE
Wasson CO_2-Removal plant	23.4	Gas turbine (captive)	Yoakum	Occidental Permian	1988	52122
Goldsmith Solar	16.8	Solar PV	Ector	Oxy Renewable Energy	2020	63388
NET Power La Porte demo	—	Gas turbine (demo)	Harris	NET Power	2018	60910
Battleground (Houston Chem.) · divested	381	Gas combined-cycle	Harris	Oxy Vinyls	1982	50043
Deer Park · divested	n/d	—	Harris	Oxy Vinyls	—	50471

Air & emissions permits (TCEQ + EPA)

FACILITY	COUNTY	TCEQ AIR PERMIT	EPA GHGRP	WHAT IT COVERS
Century gas / CO_2 plant	Pecos	RN105567218 (acct 85488)	1004301	CO_2 treating; reports as a CO_2 supplier
Block 31 plant	Crane	RN100223569; NSR 73238; Title V 547	1001132	Gas processing + CO_2-flood emissions
Wasson CO_2-removal plant	Yoakum	Title V O553 (RN100226687)	1011767 / 1002629	CO_2 removal + permanent storage (1st U.S. MRV plan)
Denver Unit CO_2-recovery plant	Yoakum	Title V O3051 (RN102413861)	—	CO_2 recovery / recompression

Grid footprint: the map also carries **10 OXY-named substations** — North Cowden, South Curtis Ranch, Welch, Cogdell and Century Plant (the last two operator-tagged "Occidental Petroleum"), plus four Goldsmith substations and an Oxy Tap — the physical points where OXY ties into the Oncor / LCRA grid.

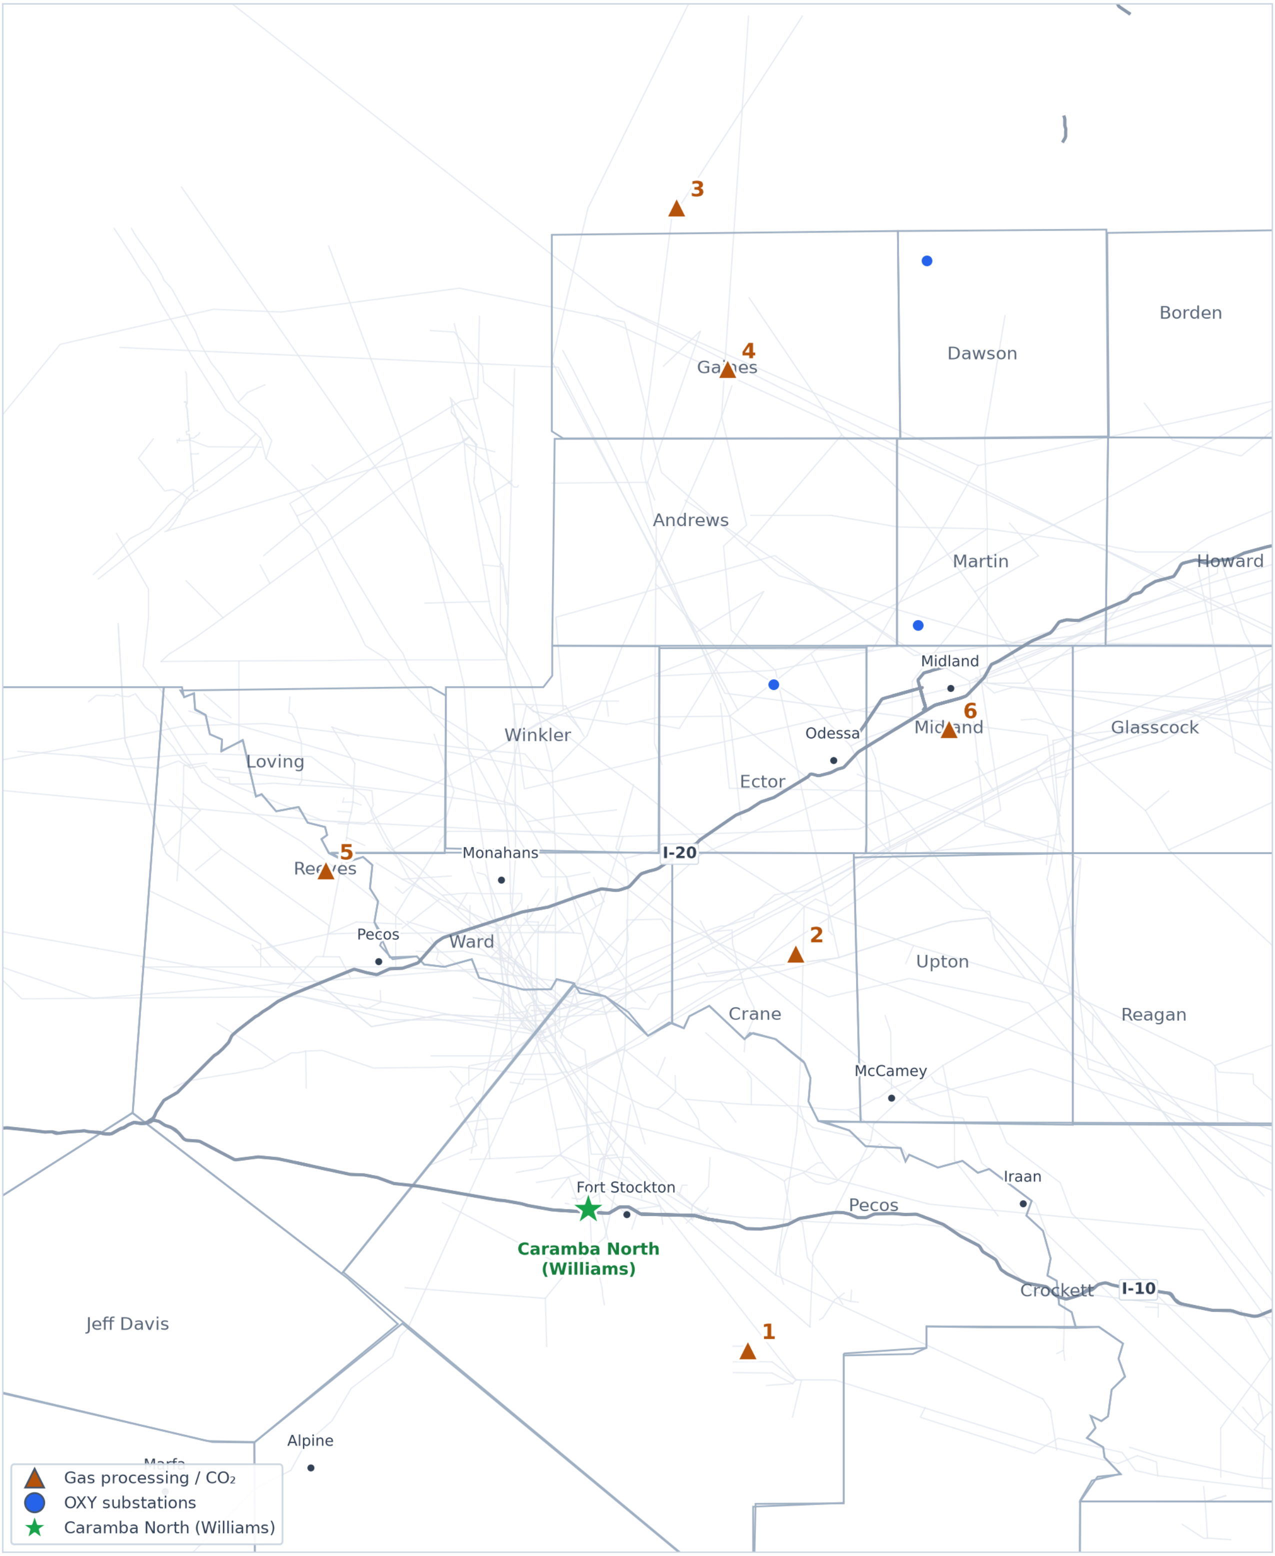
Section 3

Midstream, pipelines & gas processing

> A behind-the-meter data center makes its own electricity from natural gas, so it needs a dependable way to gather, treat and move that gas — and, increasingly, to manage the carbon that comes with burning it. This

section profiles OXY's gas and CO_2 network: what it owns, what it has sold, and which pieces could supply fuel and carbon handling to a jointly-developed campus.

Midstream, pipelines & gas processing



Counties & roads: Census TIGER · pipelines (context): HIFLD/EIA · OXY assets: OXY filings + public facility databases

OXY-owned CO_2 / gas-processing assets and WES processing plants.

1. Century plant (Pecos) · Gas / CO_2
2. Block 31 (Crane) · Gas / CO_2
3. Wasson CO_2-EOR · Gas / CO_2
4. Denver City hub · Gas / CO_2
5. WES DBM processing · Gas / CO_2
6. Athena plant (2026) · Gas / CO_2

Century gas & CO_2 plant[2]

EXISTING

A billion-dollar plant in Pecos County that strips carbon dioxide out of natural gas and ships it off for oilfield use — the closest large OXY facility to Caramba North.

WHERE	Pecos County, Texas — near Gardendale, about 31 miles from Caramba North.
WHAT IT DOES	Cleans high-CO_2 natural gas, separating the CO_2 so the gas can be sold and the CO_2 can be reused to push more oil out of older fields.
SCALE	Handles up to 800 million cubic feet of gas a day and captures roughly 8.4 million tonnes of CO_2 a year — the largest industrial carbon-capture site in North America.
WHO CONTROLS IT	Built and run day-to-day by SandRidge; OXY funded it (~$1.1 billion) and takes all the captured CO_2. One report says OXY sold the plant itself in 2022 but still takes the carbon and operates the export pipeline.

WHY IT MATTERS FOR A DATA-CENTER JV
The single nearest piece of major OXY infrastructure to the Williams land. Its captured-CO_2 stream and the pipeline it feeds are exactly the carbon-handling backbone a gas-powered data center would need to make low-emission power claims.

Block 31 plant & CO_2 flood[3]

EXISTING

An OXY-operated oil field and small gas plant in Crane County that has used CO_2 to coax out extra oil since the 1950s — the second-closest OXY asset to Caramba North.

WHERE	Crane County, Texas — about 48 miles from Caramba North.
WHAT IT DOES	Injects CO_2 into an old oil reservoir to recover more oil, and processes the gas that comes back up.
SCALE	A modest 41 million cubic feet a day of gas processing; about 344 wells; roughly 7,500 barrels of oil and 730 million cubic feet of gas in a recent month.
WHO CONTROLS IT	100% owned and operated by OXY.

WHY IT MATTERS FOR A DATA-CENTER JV
Shows OXY's operating presence stretches to within ~50 miles of Caramba North. A fully-instrumented, OXY-run site that anchors the company's footprint on the Williams side of the basin.

Wasson / Denver Unit CO_2 field[4]

EXISTING

The world's largest CO_2-enhanced oil project, and the demand center that makes OXY's whole CO_2 network worth building.

WHERE	Gaines and Yoakum Counties, Texas (about 130 miles north of Caramba North).
WHAT IT DOES	Injects huge volumes of CO_2 underground to recover oil — and, in doing so, permanently stores much of that CO_2, which is independently measured and verified.
SCALE	About 420 million cubic feet of CO_2 injected per day across ~27,000 acres. It permanently stored 3.7 million tonnes of CO_2 in 2023 and has injected ~213 million tonnes over its life.
WHO CONTROLS IT	Owned and operated by OXY (Occidental Permian).

WHY IT MATTERS FOR A DATA-CENTER JV
Proof that OXY can permanently and verifiably store CO_2 at massive scale — the credibility behind any “carbon-managed” power offering. It holds the U.S.'s first-ever government-approved CO_2 storage-monitoring plan.

Denver City CO_2 hub[5]

EXISTING

The Grand Central Station of West Texas carbon dioxide — where OXY's CO_2 supply lines meet and get routed to its oil fields.

WHERE	Gaines / Yoakum Counties, Texas (Denver City area).
WHAT IT DOES	Collects CO_2 from multiple long-distance pipelines and distributes it to OXY's enhanced-oil-recovery fields.
SCALE	Where pipelines carrying well over 1.5 billion cubic feet of CO_2 a day converge.
WHO CONTROLS IT	A shared interconnection point; OXY is one of the main users drawing CO_2 from it.

WHY IT MATTERS FOR A DATA-CENTER JV
The routing node that ties OXY's owned CO_2 sources to demand. Useful context for understanding how flexibly OXY could direct captured carbon toward a new use such as a power-plus-storage campus.

Western Midstream (WES) — the gas, crude & water engine[6]

EXISTING

The separately-listed pipeline company OXY controls and relies on to gather and process most of its Permian gas, oil and water.

WHERE	Across the Delaware Basin (West Texas + southeast New Mexico).
WHAT IT DOES	Gathers, processes and moves natural gas, crude oil and produced water for OXY and others — the physical plumbing beneath OXY's production.
SCALE	Gas-processing capacity scaling toward ~2,490 million cubic feet a day; supplied roughly 60% of WES's revenue in 2025.
WHO CONTROLS IT	OXY owns about 39.5% and controls WES through the general partner. OXY has explored selling the entire stake (~$20 billion) but no sale has closed.

WHY IT MATTERS FOR A DATA-CENTER JV
The most flexible part of OXY's toolkit: WES could contract to gather and deliver the natural gas that fuels a behind-the-meter power plant, and handle the water, without OXY having to build anything new.

WES Delaware (DBM) gas processing[7]

EXISTING

OXY-affiliated gas-processing plants in the heart of the Delaware Basin that turn raw wellhead gas into pipeline-ready product.

WHERE	Culberson, Loving, Reeves and Ward Counties (TX) and Eddy/Lea (NM).
WHAT IT DOES	Removes liquids and impurities from raw natural gas so it can be sold or burned for power.
SCALE	A five-plant complex (including the Mentone and North Loving trains) totaling roughly 1,600+ million cubic feet a day and still growing.
WHO CONTROLS IT	Owned by Western Midstream, which OXY controls.

WHY IT MATTERS FOR A DATA-CENTER JV
Physical processing capacity already sitting in the Delaware Basin — the supply side of any deal to dedicate gas to on-site power generation.

Athena gas-processing plant[8]

PLANNED

A new processing plant being built to handle OXY's Midland-Basin gas after OXY sold the gathering lines that feed it.

WHERE	Midland Basin, Texas.
WHAT IT DOES	Processes the natural gas OXY produces in the Midland Basin under a long-term agreement.
SCALE	300 million cubic feet a day of gas and 40,000 barrels a day of natural-gas liquids.
WHO CONTROLS IT	Built and owned by Enterprise Products; OXY is a committed customer. Expected online late 2026.

WHY IT MATTERS FOR A DATA-CENTER JV
Confirms OXY's Midland gas has guaranteed processing capacity — relevant if a campus were sited on the Midland side rather than near Pecos.

Bravo Dome CO_2 field & pipeline[9]

EXISTING

OXY's own natural source of nearly-pure carbon dioxide in New Mexico, with a pipeline that carries it to the Denver City hub.

WHERE	Northeast New Mexico, feeding a 218-mile pipeline to Denver City, Texas.
WHAT IT DOES	Produces naturally-occurring CO_2 (98–99% pure) and pipes it to OXY's Texas oil fields.
SCALE	About 300 million cubic feet a day of CO_2; the pipeline moves up to 382 million cubic feet a day.
WHO CONTROLS IT	OXY operates the field and pipeline (with minority partners).

WHY IT MATTERS FOR A DATA-CENTER JV
The part of OXY's CO_2 supply it actually owns (as opposed to buys). Demonstrates OXY controls carbon supply end-to-end — source, pipeline and storage.

Cortez Pipeline — OXY is a customer, not the owner[10]

EXISTING

The largest CO_2 pipeline in the U.S. — frequently mis-attributed to OXY, but actually owned by Kinder Morgan and ExxonMobil. OXY just buys capacity on it.

WHERE	Southwest Colorado to Denver City, Texas (~500 miles).
WHAT IT DOES	Carries naturally-occurring CO_2 from Colorado to the West Texas oil fields.
SCALE	About 1.5 billion cubic feet a day — roughly 80% of all CO_2 used for Permian oil recovery.
WHO CONTROLS IT	Kinder Morgan (~50%, operator) and ExxonMobil (~37%). OXY owns no part of it and is only a shipper.

WHY IT MATTERS FOR A DATA-CENTER JV
Included to correct a common error: OXY does not own this line. It matters only as a reminder to verify which CO_2 assets OXY actually controls before relying on them.

Midland gas gathering (sold to Enterprise)[11]

DIVESTED

Gathering pipelines OXY sold in 2025 to pay down debt, converting itself from owner to customer.

WHERE	Four Midland-Basin counties, Texas (~73,000-acre dedication).
WHAT IT DOES	Gathered raw gas from OXY's Midland wells (now feeds the Enterprise/Athena system).
SCALE	About 200 miles of gathering lines serving 1,000+ drilling locations.
WHO CONTROLS IT	Sold to Enterprise Products for $580 million in August 2025; OXY stayed on as a committed shipper.

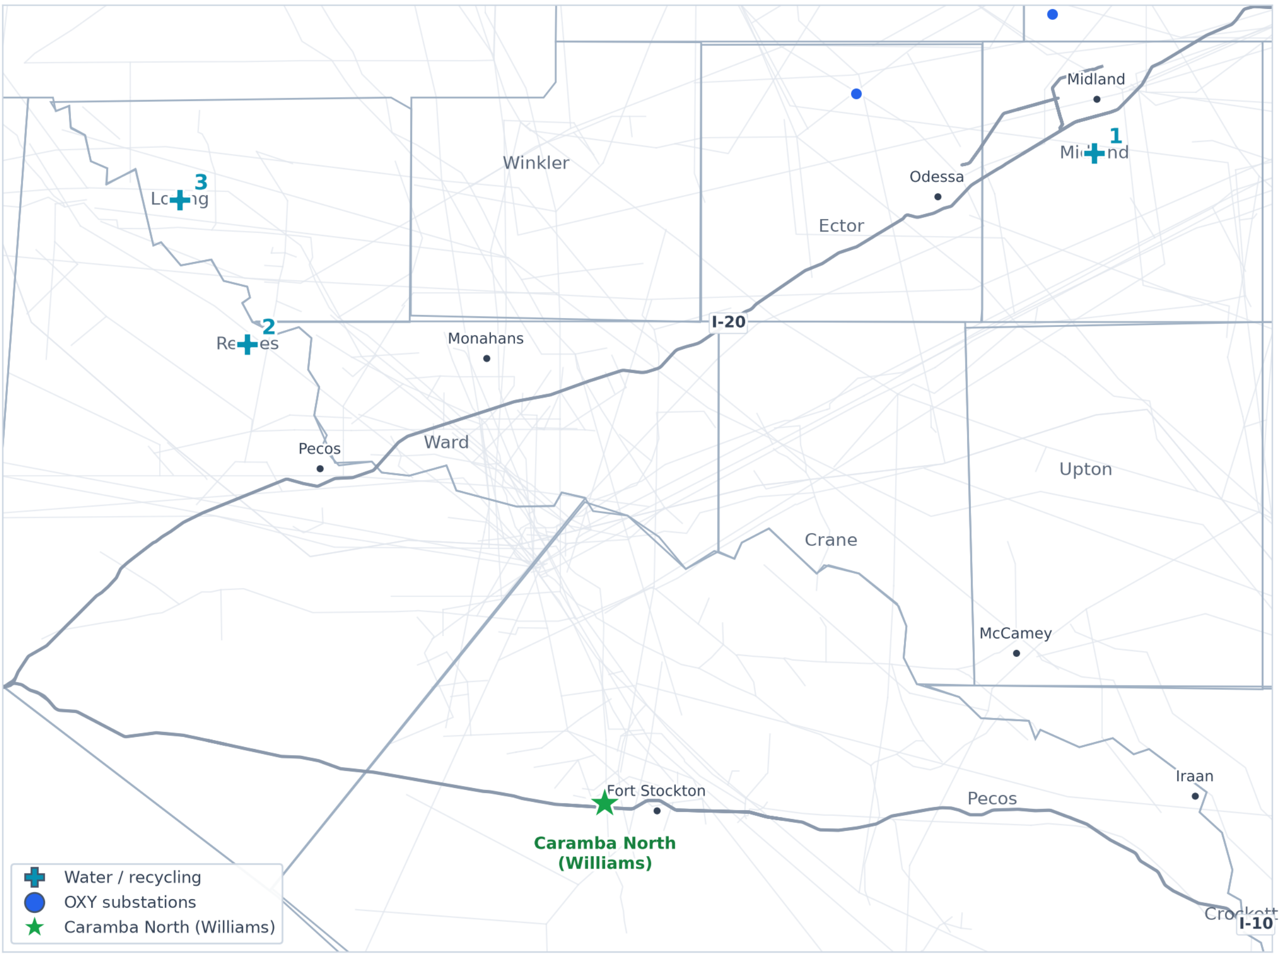
WHY IT MATTERS FOR A DATA-CENTER JV
Signals OXY's current strategy — sell midstream for cash, keep the production. A partner should expect OXY to prefer contracting for services over owning new pipe.

Section 4

Water infrastructure

> Large data centers use significant water for cooling, and West Texas is water-short — making water access a permitting and community flashpoint. OXY and its affiliate Western Midstream run one of the larger produced-water and recycling networks in private hands, infrastructure that (paired with emerging desalination) could supply non-potable cooling water without drawing down scarce freshwater.

Water — produced-water recycling & desalination



Counties & roads: Census TIGER · pipelines (context): HIFLD/EIA · OXY assets: OXY filings + public facility databases

OXY and Western Midstream produced-water recycling and desalination assets.

1. S. Curtis Ranch recycle · Water
2. WES desal pilot · Water
3. Pathfinder PW (2027) · Water

South Curtis Ranch water recycling[12]

EXISTING

OXY's flagship Midland-Basin facility for cleaning and reusing the salty water that comes up with oil, instead of using fresh water.

WHERE	Midland Basin, Texas.
WHAT IT DOES	Treats "produced water" (the brine that surfaces with oil) so it can be reused, cutting fresh-water demand.
SCALE	Has treated and reused more than 50 million barrels of water since 2021 (the partnership behind it passed ~97 million barrels by early 2026).
WHO CONTROLS IT	OXY, in a long-running partnership with Select Water Solutions.

WHY IT MATTERS FOR A DATA-CENTER JV
Demonstrates OXY can move and treat large volumes of non-fresh water — the capability a water-hungry data center needs for cooling without competing for scarce drinking water.

Produced-water desalination pilot[13]

PILOT / DEMO

A working pilot that turns oilfield brine into clean fresh water — the early-stage technology most relevant to supplying data-center cooling water.

WHERE	Reeves County, Texas (near Red Bluff Reservoir).
WHAT IT DOES	Desalinates produced water, producing reclaimed fresh water suitable for cooling, irrigation or discharge.
SCALE	Takes in 2,000 barrels a day and yields about 1,000 barrels a day of fresh water — ten times the size of the 2023 first pilot.
WHO CONTROLS IT	Run through Western Midstream's industry joint program; started up June 2026.

WHY IT MATTERS FOR A DATA-CENTER JV
The clearest line of sight to a sustainable cooling-water supply. If scaled, desalinated produced water could let a campus run cooling without drawing down West Texas aquifers — a major permitting and community advantage.

Pathfinder produced-water pipeline[14]

PLANNED

A large new water pipeline being built to move produced water across the Delaware Basin for reuse and disposal.

WHERE	Eastern Loving County, Texas.
WHAT IT DOES	Moves large volumes of produced water for recycling and managed disposal.
SCALE	42 miles of 30-inch pipe carrying more than 800,000 barrels a day.
WHO CONTROLS IT	Western Midstream; targeted in service 1 January 2027.

WHY IT MATTERS FOR A DATA-CENTER JV
Adds dedicated, high-volume water-transport capacity. Relevant to siting a campus where cooling-water supply and wastewater handling both need to scale.

Aris produced-water network (via WES)[15]

EXISTING

A recently-acquired, basin-spanning water system that makes OXY's affiliate one of the biggest water handlers in the Permian.

WHERE	Loving, Reeves and Ward Counties (TX) and Eddy/Lea (NM).
WHAT IT DOES	Gathers, recycles and disposes of produced water across a 625,000-acre dedication.
SCALE	Handles ~1.8 million barrels a day over ~830 miles of pipe, with ~1.5 million barrels a day of recycling capacity.
WHO CONTROLS IT	Western Midstream (acquired October 2025).

WHY IT MATTERS FOR A DATA-CENTER JV
The scale here is the point: OXY's affiliate already operates one of the region's largest water platforms, so cooling-water and wastewater logistics for a campus would not start from scratch.

TerraLithium (lithium from brine) — California-only, for now[16]

PLANNED

OXY's technology for pulling battery-grade lithium out of salty water — promising, but so far only deployed in California, not Texas.

WHERE	Imperial Valley, California (not the Permian).
WHAT IT DOES	Extracts lithium from brine without evaporation ponds — effectively an advanced brine-treatment process.
SCALE	Capacity and start-up date not disclosed.
WHO CONTROLS IT	OXY, in a 50/50 venture with Berkshire Hathaway Energy.

WHY IT MATTERS FOR A DATA-CENTER JV
Included for completeness and to mark a boundary: there is no announced Texas produced-water lithium project. Treat Permian “water-to-lithium” as strategic intent, not an asset.

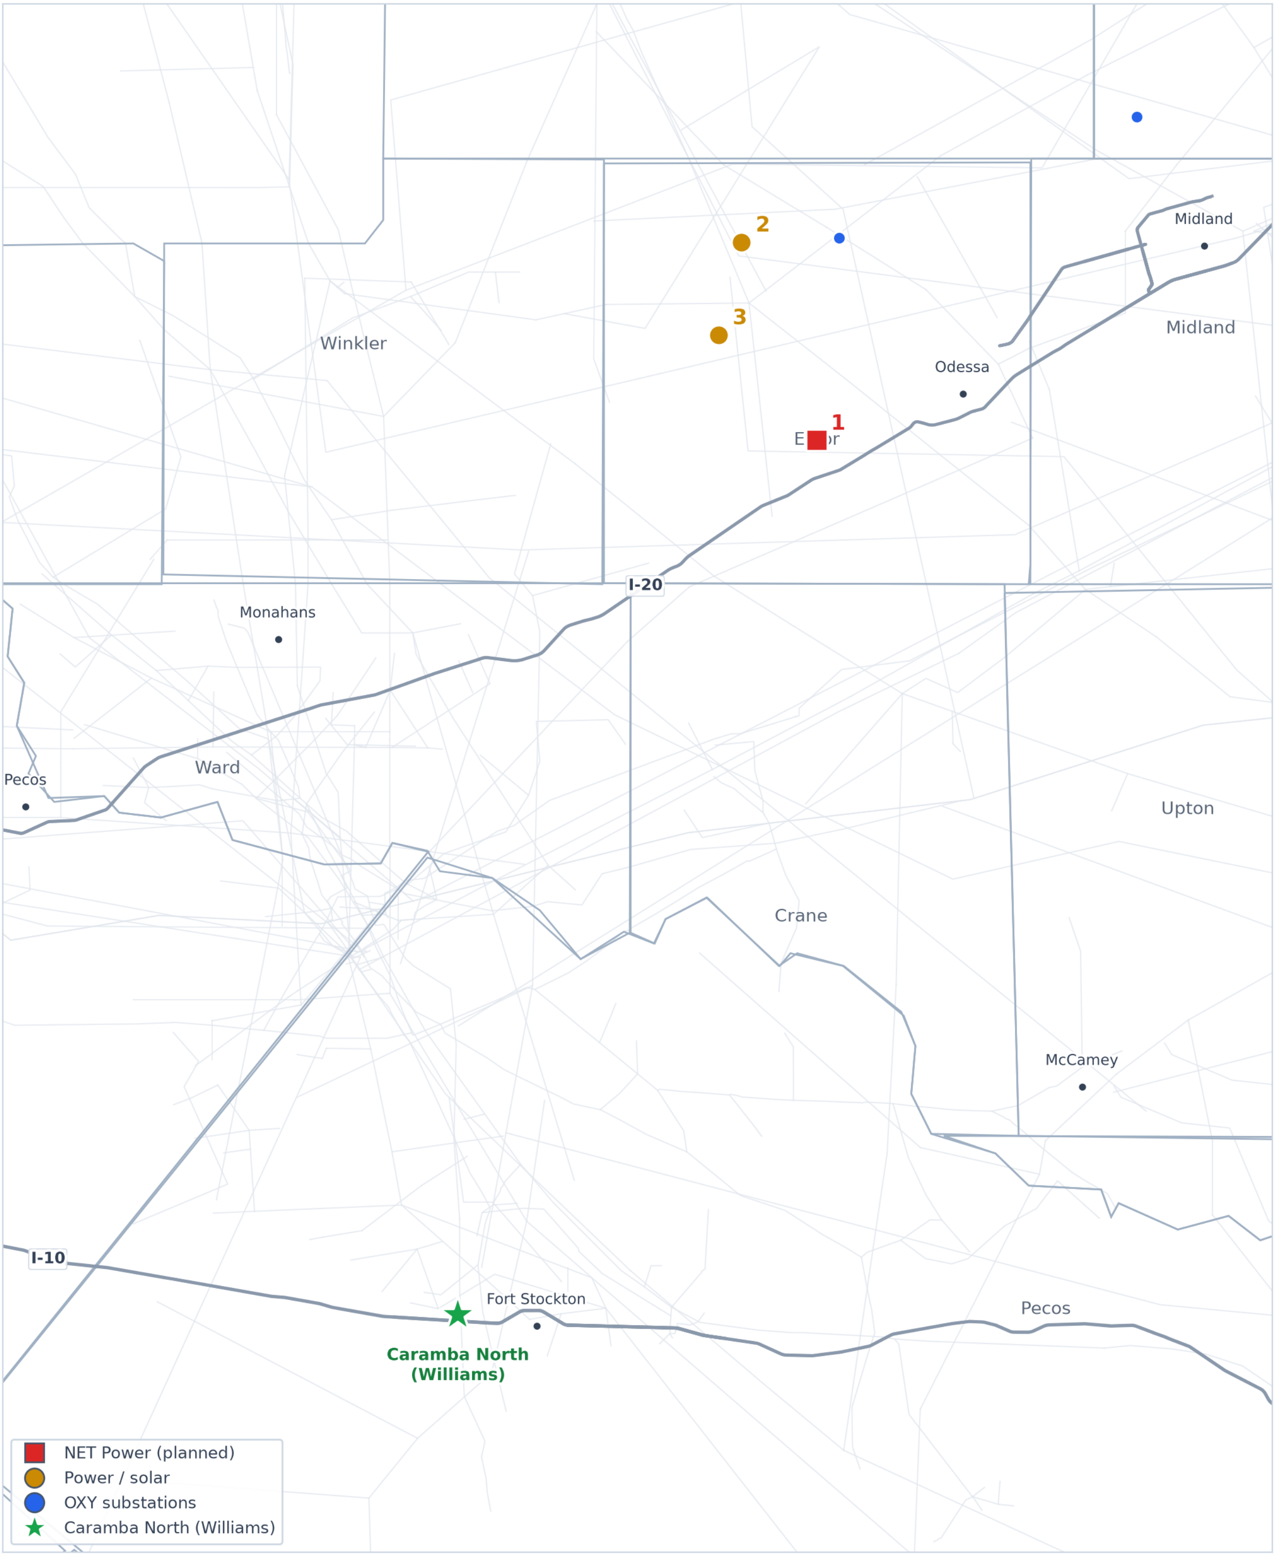
Section 5

Power generation & NET Power

> Power is the gating constraint for AI data centers, and the multi-year wait to connect to the ERCOT grid is the single biggest schedule risk. OXY's most strategically relevant asset to a data-center JV is its power platform

— above all NET Power, purpose-built to deliver firm, around-the-clock, low-emission gas power behind the meter and skip the grid queue. Each generation asset is profiled through that lens.

Power generation & NET Power



Counties & roads: Census TIGER · pipelines (context): HIFLD/EIA · OXY assets: OXY filings + public facility databases

Solar OXY uses to power its operations, plus the NET Power gas-to-power site near Odessa.

1. NET Power (Ector) · NET Power
2. Goldsmith Solar 16 MW · Power / solar
3. STRATOS solar · Power / solar

NET Power — clean gas-to-power plant[17]

PLANNED

OXY's most strategically important asset for a data center: a natural-gas power plant designed to capture nearly all of its own carbon dioxide, built near Odessa.

WHERE	Ector County, near Odessa, Texas — on land OXY leases.
WHAT IT DOES	Generates electricity from natural gas while capturing ~97% of the CO_2 automatically, using almost no water for cooling.
SCALE	The first commercial plant was re-scoped in 2026 from 300 to 80 megawatts; a proven demonstration plant has run near Houston since 2018.
WHO CONTROLS IT	OXY is the largest shareholder of NET Power (~46%) and provides the site, the CO_2 handling and a power off-take.

WHY IT MATTERS FOR A DATA-CENTER JV
This is the template. A NET Power plant delivers firm, 24/7, low-emission power behind the meter — skipping the multi-year grid-connection queue that is the biggest schedule risk for any AI campus, with the carbon already captured. The clearest path to a co-developed, carbon-managed, gas-powered data center.

Goldsmith Solar[18]

EXISTING

A small OXY solar farm near Odessa that powers its own oilfield operations — proof OXY builds generation to serve its own load.

WHERE	Ector County, Texas.
WHAT IT DOES	Generates solar power used directly to run OXY's enhanced-oil-recovery equipment.
SCALE	16 megawatts, about 174,000 panels; operating since October 2019 under a 12-year power agreement.
WHO CONTROLS IT	OXY is the power off-taker (third-party owned/built).

WHY IT MATTERS FOR A DATA-CENTER JV
A working example of OXY arranging dedicated, behind-the-meter renewable power for its own use — the same contracting muscle a campus would need for on-site solar.

STRATOS dedicated solar[19]

PLANNED

A large solar project contracted to power OXY's flagship carbon-capture plant near Odessa.

WHERE	Ector County area, Texas.
WHAT IT DOES	Supplies renewable electricity to run the STRATOS direct-air-capture plant.
SCALE	Up to 500 megawatts (DC), with ~145 megawatts contracted to STRATOS.
WHO CONTROLS IT	Owned/built by Origis; OXY is the power customer.

WHY IT MATTERS FOR A DATA-CENTER JV
Shows OXY can line up several hundred megawatts of dedicated renewable supply in the Odessa area — directly relevant to powering a co-located campus cleanly.

Santa Garcias Solar[20]

PLANNED

A larger OXY-linked solar project in South Texas, awaiting grid connection.

WHERE	Kleberg County, South Texas (off the Permian map).
WHAT IT DOES	Will supply renewable power, tied to OXY's South Texas carbon-capture ambitions.
SCALE	265 megawatts.
WHO CONTROLS IT	OXY-linked; grid-interconnection agreement reached February 2026, operation slipped toward 2029.

WHY IT MATTERS FOR A DATA-CENTER JV
Evidence of OXY's appetite to build utility-scale renewables, though this one is far from Pecos County.

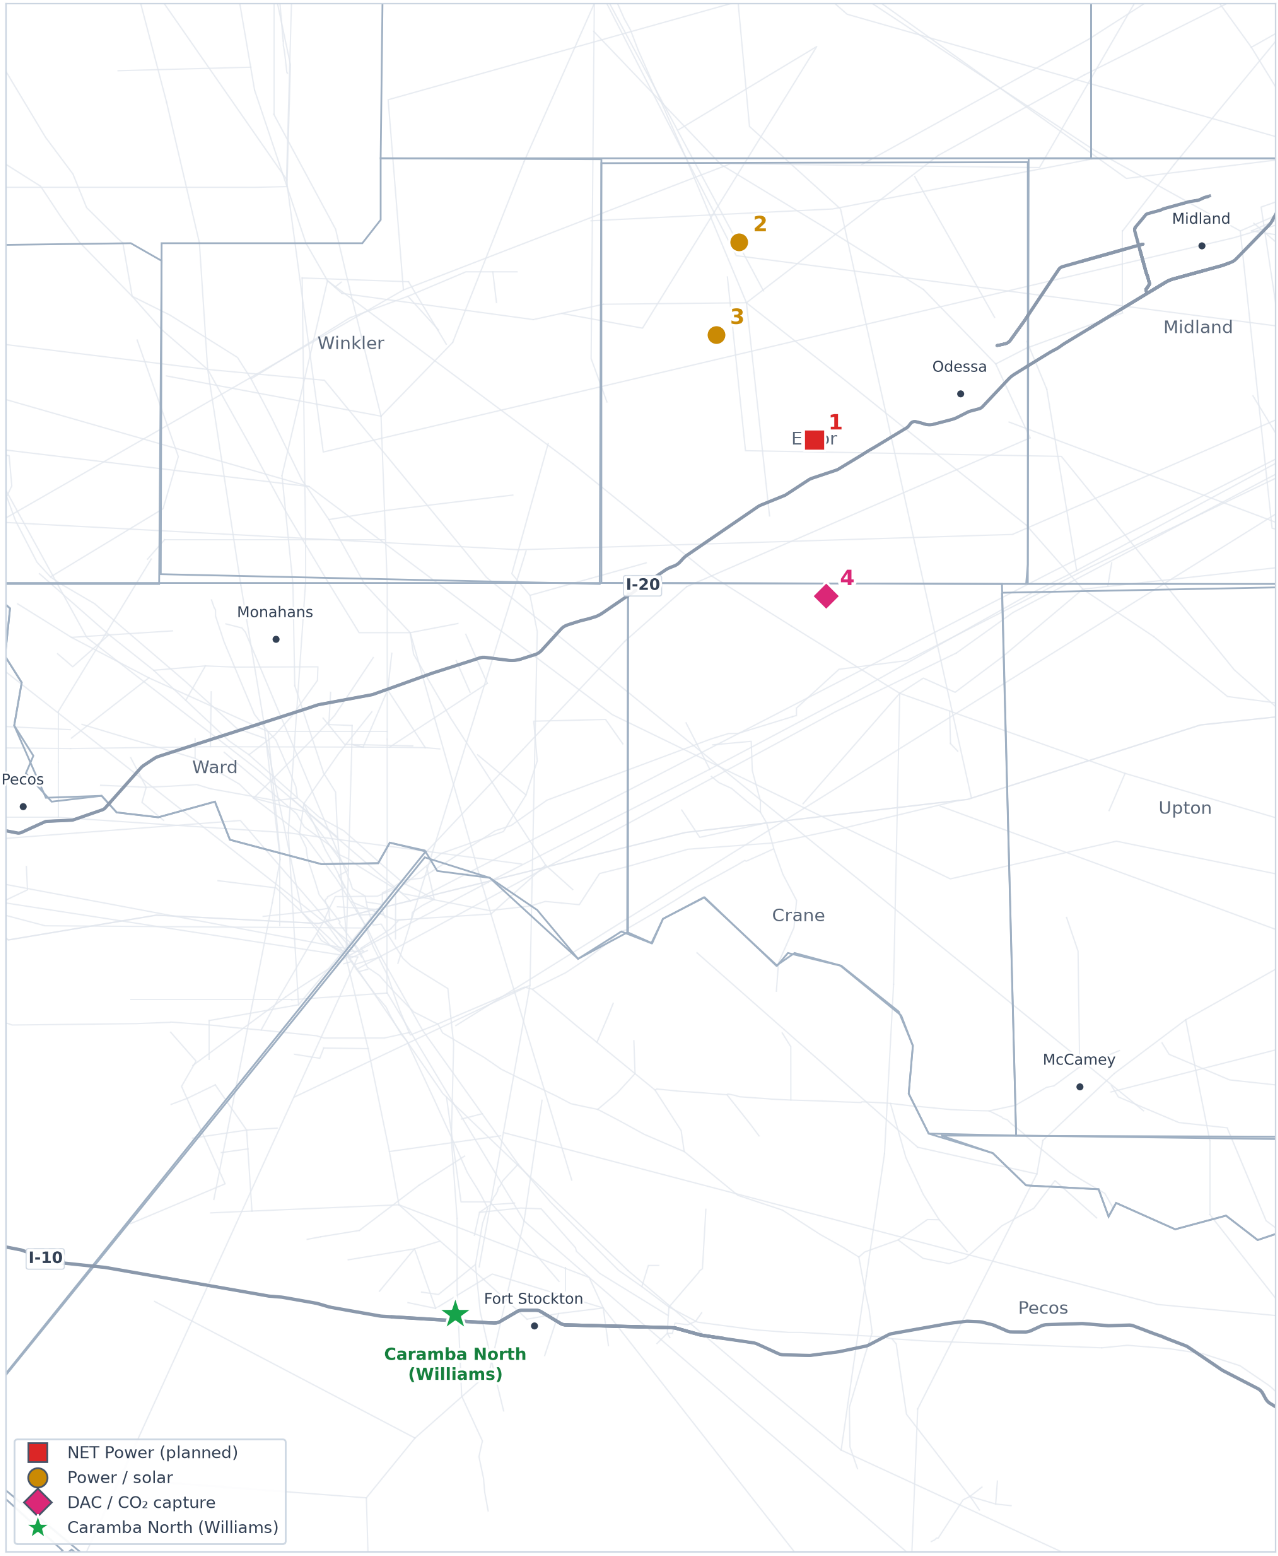
Section 6

Carbon capture

> Carbon management is becoming a precondition for hyperscalers' clean-energy commitments. OXY's capture and storage assets offer a partner a credible path to carbon-neutral claims for a gas-powered

campus — though today's economics depend on subsidies and premium buyers, so this section is deliberately right-sized as the least-mature part of the platform.

Carbon capture — the Odessa low-carbon cluster



Counties & roads: Census TIGER · pipelines (context): HIFLD/EIA · OXY assets: OXY filings + public facility databases

The Odessa low-carbon cluster: STRATOS direct-air-capture with co-located solar and NET Power.

1. NET Power (Ector) · NET Power
2. Goldsmith Solar 16 MW · Power / solar
3. STRATOS solar · Power / solar
4. STRATOS DAC (Ector) · Carbon capture

STRATOS — direct air capture plant[21]

UNDER CONSTRUCTION

The world's largest plant designed to pull CO_2 straight out of the open air — OXY's showcase carbon-removal facility near Odessa.

WHERE	Ector County, near Odessa, Texas.
WHAT IT DOES	Removes CO_2 directly from the atmosphere and stores it underground, generating carbon-removal credits.
SCALE	Designed for up to 500,000 tonnes of CO_2 a year; cost ~$1.3 billion; targeted online in 2026.
WHO CONTROLS IT	OXY's 1PointFive subsidiary, with a ~$550 million investment from BlackRock.

WHY IT MATTERS FOR A DATA-CENTER JV
Gives a partner a turnkey way to offset a gas-powered campus's emissions and market it as carbon-neutral — but the credits are expensive, so treat this as a premium add-on, not a low-cost solution.

King Ranch / South Texas carbon-storage hub[22]

PLANNED

A much larger carbon-capture-and-storage hub OXY is developing in South Texas, backed by a major federal grant.

WHERE	Kleberg County, South Texas (off the Permian map).
WHAT IT DOES	Will capture and permanently store CO_2 at regional scale.
SCALE	Starting at 500,000 tonnes a year, with potential to reach tens of millions; up to $500 million in U.S. Department of Energy support.
WHO CONTROLS IT	OXY's 1PointFive, with potential investment from ADNOC/XRG; still pre-construction.

WHY IT MATTERS FOR A DATA-CENTER JV
Signals OXY's long-term ambition in carbon storage, but it is far from Pecos County and years from operating — context, not a near-term lever for a Permian campus.

1PointFive carbon-removal sales[23]

EXISTING

OXY's track record selling carbon-removal credits to blue-chip buyers — evidence there is a real market for the offsets a campus could use.

WHERE	Corporate (buyers worldwide).
WHAT IT DOES	Sells verified carbon-removal credits from OXY's capture plants.
SCALE	Includes a 500,000-tonne deal with Microsoft (2024), 250,000 with Amazon, 400,000 with Airbus, plus JPMorgan, ANA and others.
WHO CONTROLS IT	OXY's 1PointFive.

WHY IT MATTERS FOR A DATA-CENTER JV
Shows hyperscalers (notably Microsoft and Amazon) already buy OXY's carbon removal — a natural commercial bridge to the same companies as data-center tenants.

Appendix A

Financial profile[24]

Post-OxyChem (sold to Berkshire Hathaway, closed 2 Jan 2026), Occidental reports three businesses — Oil & Gas, Midstream & Marketing, and Low-Carbon Ventures (1PointFive). The headline of the last two years is debt reduction: **net debt roughly halved** and principal debt fell toward a $10B target, restoring an investment-grade rating. A data-center partner reads this as a counterparty that is de-risking and disciplined on capital — but also one that prefers contracts and asset sales over new owned construction.

METRIC ($M UNLESS NOTED)	FY2024	FY2025	Q1 2026	FY2026 GUIDANCE
Net debt (total debt − cash)	23,992	20,428	**11,860**	—
Principal debt (headline)	~24.9B	~15.0B	13.3B*	target $10B
Operating cash flow	11,439	10,532	~2,000	n/d
Free cash flow	5,176	4,105	1,700**	>$1.2B incr.
Capital expenditure	6,263	6,427	~1,450	**5,500–5,900**
Net income to common	2,377	1,647	3,175***	—
Total production (Mboe/d)	—	1,460 (Q4)	1,426	1,410–1,460
Permian production (Mboe/d)	—	~800 (Q4)	787 (55%)	783–803 (Q2)

CAPITAL SPENDING (2026)

- FY2026 capex guided **$5.5–5.9B**, cut ~8% from the initial frame; ~70% to US onshore.
- Low-Carbon Ventures / 1PointFive capex only **~$100M in 2026** as STRATOS spend rolls off.
- FY2027 guidance and full per-segment capex split: not disclosed.

RATINGS & PRIORITIES

- **Fitch upgraded OXY to BBB** (investment grade), 26 Feb 2026.
- Capital priorities: debt to $10B, then a growing dividend (raised ~8% to $0.26/qtr), then cash ahead of the 2029 preferred redemption. Buybacks de-emphasized.

Asset sales that funded the debt paydown

ASSET → BUYER	PROCEEDS	CLOSED
OxyChem → Berkshire Hathaway	$9.7B cash	2 Jan 2026
Delaware upstream → Permian Resources; DJ minerals → Elk Range	~$1.2B	Q1 2025
Midland-Basin gas gathering → Enterprise Products	$580M	22 Aug 2025

Appendix B

The Berkshire Hathaway relationship[25]

> Berkshire is OXY's most important financial partner, with four layers of exposure: an **$8.5B preferred stock** paying 8%, ~83.9M warrants, a ~27% common stake, and the OxyChem business it bought outright in January 2026. For a JV, the relevance is that Warren Buffett's company is comfortable underwriting OXY at scale and praises its carbon-capture leadership — a useful signal of institutional confidence.

The 2019 preferred stock — the structural anchor

- Berkshire holds **$10B face of perpetual preferred at an 8% dividend** (~$680M/yr at the ~$8.5B remaining), originally to fund OXY's 2019 Anadarko purchase.
- OXY must redeem pieces at a **10% premium** whenever its dividends + buybacks exceed **$4.00/share**; it can redeem the whole balance at **105% from August 2029**.
- Only **~$1.5B has been redeemed** (all in 2023); buyback cuts since then paused further redemptions. OxyChem proceeds are going to **debt, not the preferred**.

WARRANTS

- **~83.9M warrants** at **$59.62**, unexercised; expire one year after the preferred is fully redeemed.

COMMON STAKE

- **~265M shares (~27%)**, flat since Feb 2025. FERC has authorized Berkshire to go up to 50%.

> "Berkshire has no interest in purchasing or managing Occidental. We particularly like its vast oil and gas holdings... as well as its leadership in carbon-capture initiatives, though the economic feasibility of this technique has yet to be proven." — Warren Buffett, Berkshire 2023 letter

Appendix C

Caveats & confidence

> Each item below is flagged because it is **not publicly disclosed**, **recently changed**, or **commonly mis-stated** — and material enough that relying on a wrong version would mislead a partner.

- **NET Power's Odessa plant is no longer 300 MW.** It was re-scoped in March 2026 to an 80 MW design using conventional turbines plus bolt-on capture; older "300 MW Allam-cycle" figures are superseded.
- **No named hyperscaler is attached to NET Power's plant yet.** The data-center fit is a strong category thesis, not a signed contract — present it as such.
- **OXY's Western Midstream stake is ~39.5%, not "49%,"** and OXY has explored selling it entirely (~$20B). Don't treat WES as a fixed half-owned asset.
- **OXY does not own the Cortez CO_2 pipeline** (Kinder Morgan / ExxonMobil do); OXY is only a shipper. It does own the Bravo system in New Mexico.
- **Carbon capture is barely economic today** — roughly $400–600+/tonne cost against a ~$180/tonne federal credit; it depends on subsidy-stacking and premium buyers.
- **TerraLithium (lithium-from-brine) is California-only;** there is no announced Texas produced-water project.
- **Several figures are genuinely undisclosed:** OXY-only produced-water volumes, South Curtis Ranch daily capacity, STRATOS per-tonne cost, FY2027 guidance, and the reported 2022 Century plant sale. Marked "not disclosed" rather than estimated.

Appendix D

Sources & notes

> Every source citation and raw facility-database identifier (EPA, EIA, RRC, PHMSA, TCEQ, DOE) referenced in this report is collected here, numbered to the markers in the text.

1. **1.** ERCOT GIS interconnection queue (INR numbers); EIA-860 generation inventory (plant codes); TCEQ Central Registry air permits; EPA Greenhouse Gas Reporting Program. These are the source layers behind the map (ercot_queue, eia860_plants, substations). "Divested" = transferred with the OxyChem sale to Berkshire Hathaway (closed 2 Jan 2026).
2. **2.** Century gas/CO_2 plant — EPA Greenhouse Gas Reporting Program facility 1004301; CO_2 export pipeline PHMSA operator ID 31502; TCEQ regulated entity RN105567218 (air account 85488). Sources: Oil & Gas Journal (start-up); SandRidge release, 30 Jun 2008; MIT Sequestration database; PHMSA. “800 MMcf/d” is gas-treating capacity; “~450 MMcf/d” is the CO_2 export rate.
3. **3.** Block 31 — EPA GHGRP facility 1001132 (115,965 t CO_2e, 2023); EIA-757 plant NGPP480657 (41 MMcf/d); Texas RRC operator #630591; TCEQ RN100223569, NSR permit 73238, Title V FOP 547; CO_2 injected under Class II UIC. Sources: EPA Envirofacts; EIA-757; RRC; TCEQ.
4. **4.** Wasson / Denver Unit — EPA GHGRP facility 1011767; EPA Subpart RR monitoring plan 1011767-1 approved 27 Dec 2015 (first ever), amended 1011767-2 (2023); 3,669,743 t net stored 2023; ~212.8 Mt cumulative; RRC field #95397, operator #617544; co-located CO_2-removal plant GHGRP 1002629, TCEQ Title V O553; Denver Unit recovery plant TCEQ O3051. Sources: EPA Envirofacts; RRC; Oil & Gas Journal EOR surveys.
5. **5.** Denver City hub — convergence of the Cortez (~1.5 Bcf/d), Bravo (382 MMcf/d) and Century lines. Sources: Kinder Morgan CO_2 operations; Oil & Gas Journal.
6. **6.** Western Midstream Partners (NYSE: WES) — OXY interest ~39.5% (stepped down from ~41.9% after a 3 Feb 2026 unit redemption and Delaware contract reset). Sources: WES 2025 10-K (18 Feb 2026); SEC 13D/A & 8-K (Jan–Feb 2026); Hart Energy.
7. **7.** WES Delaware Basin Midstream (DBM): Mentone III (300 MMcf/d), North Loving I (250) / II (300, ~2027), Ramsey (~500). Sources: WES 2025 10-K; WES investor materials.
8. **8.** Athena cryogenic plant (Enterprise Products), in-service Q4-2026. Sources: Enterprise/BusinessWire (6 Aug 2025); Oil & Gas Journal.
9. **9.** Bravo Dome CO_2 Gas Unit (NM OCD facility OGRID 16696); Bravo Pipeline 218 mi · 20-in · 382 MMcf/d, in service 1984. Sources: NM OCD; Kinder Morgan 10-Ks; IPCC SRCCS.
10. **10.** Cortez Pipeline Co.: Kinder Morgan ~50% / ExxonMobil ~37% / Cortez Vickers ~13%; PHMSA operator KM CO2 Co. LLC, OPID 31555. Sources: Oil & Gas Journal; Kinder Morgan CO_2.
11. **11.** Sold to Enterprise for $580M cash, debt-free; signed 6 Aug, closed 22 Aug 2025. Sources: Enterprise/BusinessWire; Rigzone.
12. **12.** South Curtis Ranch — operational since Mar 2021; >50 MM bbl reused by May 2024. Daily capacity not disclosed. Sources: Select Water Solutions releases (2024).
13. **13.** WES “JIP 2” desalination pilot — started up 17 Jun 2026; 2,000 bbl/d in → ~1,000 bbl/d fresh. Permian produced water is hypersaline (~120,000+ mg/L). Sources: WES release (17 Jun 2026); Texas Produced Water Consortium.
14. **14.** WES Pathfinder pipeline — 42 mi · 30-in · >800 Mbbl/d; in-service 1 Jan 2027. Sources: WES investor materials.
15. **15.** Aris Water Solutions acquired by WES, closed 15 Oct 2025; ~1,812 Mbbl/d handling, ~830 mi, ~1,560 Mbbl/d recycle. Sources: WES release; Hart Energy.
16. **16.** TerraLithium (wholly-owned OXY) + BHE Renewables 50/50 JV announced 25 Jun 2024; California geothermal brine only. Sources: OXY release & Reuters (Jun 2024).
17. **17.** NET Power (NYSE: NPWR), OXY ~46.46% via OLCV. Site near Odessa (Ector Co.), lease Q1-2024. 9 Mar 2026 update: paused the 300 MW Allam-cycle design, re-scoped to 80 MW (Siemens turbines + Entropy capture); final investment decision targeted 2H-2026, operations ~2029. No named hyperscaler is yet attached to the plant — the data-center fit is the thesis, not a signed contract. Sources: NET Power Q4/YE-2025 update; POWER Magazine; E&E News.
18. **18.** Goldsmith Solar — EIA plant 63388; 16.8 MW; commercial Oct 2019. Sources: OXY release (Oct 2019); EIA-860.
19. **19.** STRATOS dedicated solar (Origis Energy); ~500 MWdc, ~145 MW to STRATOS. Sources: Origis/OXY releases.
20. **20.** Santa Garcias Solar — 265 MW (Kleberg Co.); interconnection agreement Feb 2026; COD ~Jan 2029. Sources: ERCOT queue; OXY.

21. **21.** STRATOS — EPA Class VI storage permits issued 7 Apr 2025; up to 500,000 t/yr; ~$1.3B; BlackRock ~$550M JV. Sources: 1PointFive releases; EPA.
22. **22.** South Texas DAC hub / King Ranch (Kleberg Co.) — DOE award up to $500M (Sep 2024); RRC Kleberg Sequestration Hub. Sources: DOE; 1PointFive.
23. **23.** Verified 1PointFive carbon-removal offtake: Microsoft 500k t (Jul 2024); Amazon 250k (Sep 2023); Airbus 400k (Mar 2022); plus JPMorgan, ANA, TD, BCG and others. “Net-zero oil” deals (e.g. SK) excluded. Sources: 1PointFive releases.
