

GW Ranch Filings Review

Everything publicly filed for the Pacifico / Amazon 8,000-acre off-grid power and data center campus on Highway 18 — permits, TCEQ air authorization, county abatement, TDLR construction registrations — synthesized against the June 12 baseline memo.

Records through 2026-08-18 · Companion [xlsx: gw-ranch-filings-review-2026-08-18.xlsx](#) · Not investment advice

Amazon confirmed site owner, Aug 7, 2026 — the June memo's open tenant question, answered	7.65 GW gas-fired capacity permitted (TCEQ PSDTX1672) — largest US air authorization on record	\$900M disclosed data center capex — 3 TDLR buildings × \$300M, construction Aug–Dec 2026	Underway land clearing visible on Jul 24 satellite imagery; Ch. 312 abatement at execution stage
---	--	---	--

The tenant question is answered — and it owns the dirt

Amazon didn't lease into GW Ranch; it bought the site. Pacifico stays on as power developer and seller. Two of the June memo's three falsification conditions have now triggered.

The June 12 memo's verdict — "a permitted development option, tenant-contingent and pre-capitalized" — is superseded. In early August, three Amazon construction registrations at 6000 TX-18 surfaced in the Texas Department of Licensing and Regulation database; when Cleanview/Distilled published them on August 7, Amazon confirmed it has **acquired the 8,000-acre GW Ranch site** and issued an official statement. Deal shape per Amazon and trade press: Amazon owns the land and campus and will **purchase power from Pacifico**, which retains the air permit (Pacifico GW LLC) and the county abatement position.

- 2025-08-04 · **TCEQ air permit application filed** FILED

App 396366 / PSDTX1672, Pacifico GW LLC (RN112259775): 7.65 GW gas + 1.8 GW BESS + 750 MWac solar.
- 2026-01-21 · **Air permit issued; turbine mix disclosed** FILED

Technical review: 35 simple-cycle turbines, 5,000 MW nominal — 21× Siemens SGT-800 + 14× large-frame, OEM undecided. ≤33 Mt/yr GHG cap.
- 2026-06-22 · **GW Ranch Reinvestment Zone + Ch. 312 abatement** AGENDA

Pecos County Commissioners Court items 5–7: designate zone, approve resolution, "Accept, Approve, and Execute a Tax Abatement Agreement with Pacifico GW LLC."

The FID-intent milestone the June memo told us to watch.
- 2026-07-24 · **Land clearing visible** OBSERVED

Airbus DS satellite imagery shows site clearing / early construction.
- 2026-08-01/07 · **Amazon TDLR construction registrations** FILED

TABS2026026954 / -955 / -959 — "Pecos County Data Center" Bldgs A/B/C, 189,060 sf each, \$300M each, construction Aug–Dec 2026.
- 2026-08-07 · **Amazon confirms ownership** STATED

Official statement: on-site generation, "designed to transition to grid-connected service as interconnection timelines allow," non-potable brackish water, produced-water reuse exploration, "thousands of jobs."
- 2026-08-17 · **Grid-transition reporting** PRESS

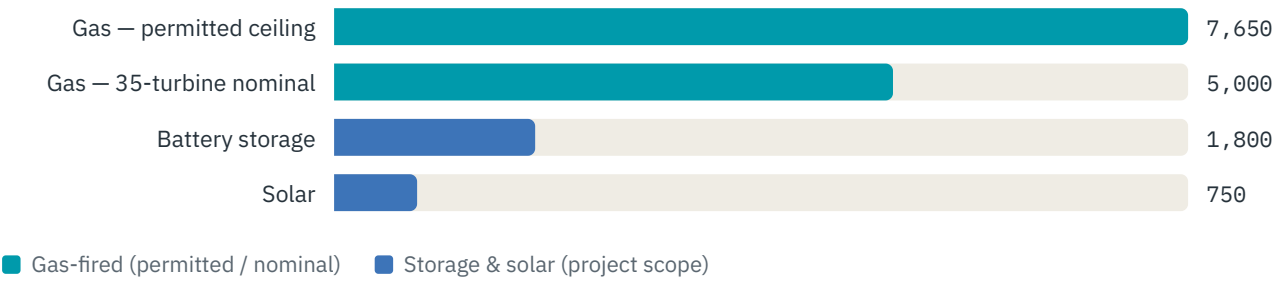

Amazon "actively exploring" front-of-meter service; no ERCOT queue entry disclosed.

What the air permit actually authorizes

Permitted headroom (7.65 GW) deliberately exceeds the 5.0 GW nominal turbine buildout — the optionality that made the permit the scarce asset Amazon bought into.

GW Ranch authorized and planned capacity

Megawatts · TCEQ PSDTX1672 (Jan 21, 2026) and Pacifico project scope

Emissions ceiling: 33 Mt CO₂e/yr and >12,000 t/yr criteria pollutants at full permitted utilization — would be the largest single US emissions source. Off-grid at start; no ERCOT interconnection.

Turbine fleet per TCEQ technical review

35 simple-cycle units · the 14 large-frame slots are the remaining OEM decision and the critical path to 5 GW

Who holds what after the Amazon acquisition

This is the Longfellow/Poolside inverse: instead of a thin-credit tenant leasing from a developer, the hyperscaler took the land and left the developer holding the permit and the power contract.

Amazon

Amazon Data Services · site owner + offtaker

- Acquired the 8,000–8,400 ac site (confirmed Aug 7; price and deed terms undisclosed)
- Filed TDLR Bldgs A/B/C — \$900M disclosed shell capex; pattern at its Floydada and Boling campuses suggests Bldgs D+ follow
- Will purchase power from Pacifico; states intent to transition to grid-connected service "as interconnection timelines allow"
- Water: non-potable brackish groundwater, custom cooling, produced-water reuse exploration

Pacifico

Pacifico GW LLC / Pacifico Energy Group · power developer + seller

- Holds TCEQ PSDTX1672 — the permit moat the June memo identified as the scarce asset
- Ch. 312 abatement counterparty per the June 22 Commissioners Court agenda
- 21 SGT-800s in the permit record; 14 large-frame units, EPC, and financing still undisclosed
- Residual position (permit + power sale + abatement) now effectively Amazon-backstopped

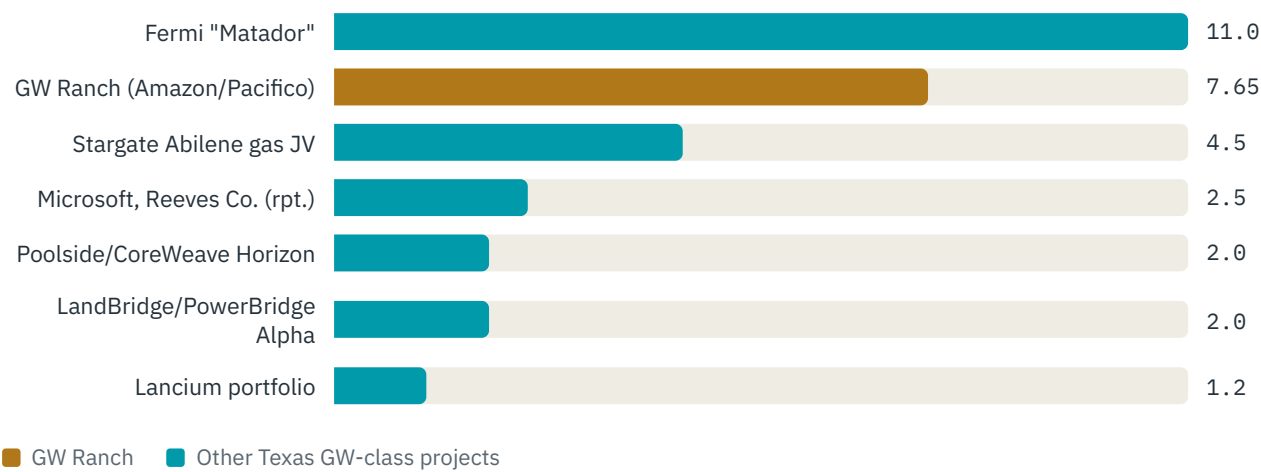

Read-across for LRP: tenant-credit risk is gone and the \$12B financing question is largely mooted — Amazon self-funds shells and can backstop the power buildout. GW Ranch flips from distressed-option watch to the most credible GW-class project in the Permian, which re-rates powered-land comps county-wide.

Texas GW-class off-grid / behind-the-meter projects

GW Ranch is now the only Permian GW-class site with an investment-grade owner, an issued air permit, and visible construction — everything else is either smaller, stalled, or unconfirmed.

Announced scale by project

Gigawatts (permitted or announced) · status as of Aug 18, 2026

Fermi and Microsoft figures are announced/reported, not permitted. Poolside/Horizon shown at pre-collapse scale.

Searched, not found — what still isn't filed

The power island's supply chain has no paper trail yet: no pipeline permit, no water permits, no ERCOT queue entry, no financing. Each of these is a discrete, watchable filing.

- **ERCOT interconnection request** NOT DISCLOSED
Amazon states grid-transition intent; a large-load or generation queue entry is the first hard signal and prices SB6 exposure.
- **RRC T-4 permit — ~15-mi, 1 Bcf/d Waha lateral** NOT LOCATED
The gas supply chain's first hard filing; the operator identity reveals the midstream partner.
- **Middle Pecos GCD water-well permits** NOT LOCATED
Brackish wells >17.5 gpm are non-exempt; filings will name the landowner of record — which should now read Amazon's SPV.
- **Executed Ch. 312 agreement text** AGENDA ONLY
Recites the property interest and buildout schedule verbatim; confirms the abatement beneficiary post-sale.
- **Deed / purchase instrument** TERMS UNDISCLOSED
Pecos County Clerk records will name Amazon's land SPV, price, and any mineral/water reservations.
- **Large-frame turbine order (14 units) • EPC • project financing** NONE ANNOUNCED
~3-year frame-turbine lead times make the OEM decision the critical path to 5 GW by 2031.
