

CARAMBA NORTH

TECHNICAL SNAPSHOT

CONFIDENTIAL OFFERING MEMORANDUM

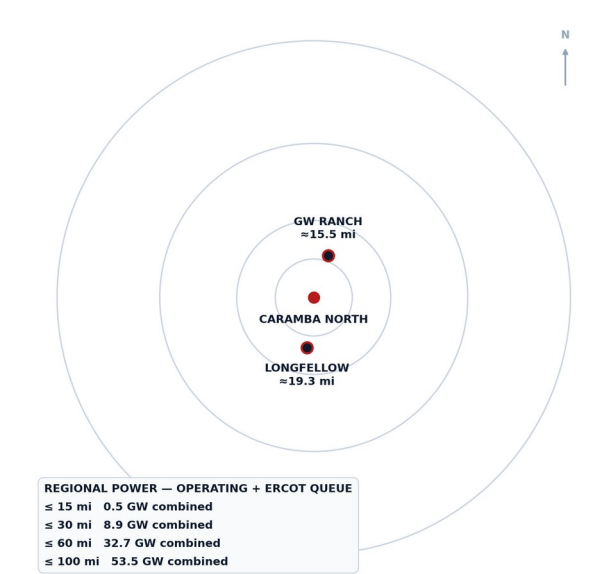

Pecos County, Texas | August 2026

Data-room reference — figures per \$2.7 diligence platform

32.7 GW	15.5 MI	19.3 MI	47,418 AF/YR
OPERATING + QUEUED, 60 MI	TO GW RANCH (7.65 GW)	TO LONGFELLOW (2 GW)	WATER PERMITTED, ADJACENT

1,300 contiguous acres on I-10 in Pecos County, positioned inside an already-forming power and data-center corridor: two hyperscale-scale projects (7.65 GW and 2 GW) sit on the same north–south line through the property at 15.5 and 19.3 miles, backed by transmission, water, and gas positions that are permitted or contract-ready, not proposed. The tables below carry the data-room figures; narrative framing is in the companion Executive Brief.

FIG 2.6 Power-Gravity Diagram

Concentric operating + ERCOT-queue capacity, Caramba North at center. GW Ranch ≈N (19°); Longfellow ≈S (188°).

SEC 2.1 The Property

As-of-right industrial land inside the fastest-growing load pocket in ERCOT — not a rezoning story.

PROPERTY FACT	VALUE
Max contiguous acreage	1,300 ac
Location	N side of I-10, Pecos Co.
Distance to Fort Stockton	≈ 5 mi
Zoning	None – as-of-right
ERCOT weather zone	Far West (highest-growth)

SEC 2.2 Transmission

Fifteen miles from the delivery point of all three approved 765 kV Permian import lines — the transmission decision is already made, upstream of this site.

TRANSMISSION FACT	VALUE
Distance to Solstice Substation (AEP/CPS Energy)	15 mi
Role of Solstice	Western terminus, 3 PUCT-approved 765 kV Permian import paths
Approval	PUCT Docket No. 55718, approved Apr 24, 2025
Local substations within 10 mi	6 (138/69 kV and 69 kV)
ERCOT-wide TPIT pipeline (planned, not built)	141 substation + 133 line upgrades

SEC 2.3 Regional Power Cluster — Pecos County

12 GW already queued in this county alone — before counting the two hyperscale campuses profiled in §2.6.

CAPACITY	OPERATING	ERCOT QUEUE
Pecos County — Solar	2,178 MW / 13 proj.	—

CAPACITY	OPERATING	ERCOT QUEUE
Pecos County — Wind	542 MW / 5 proj.	—
Pecos County — BESS	505 MW / 6 proj.	—
Pecos County — Gas	1 MW / 1 proj.	—
Pecos County — TOTAL	3,226 MW	12,039 MW / 39 proj.
Adjacent 6 counties (Reeves, Crane, Ward, Upton, Ector, Crockett)	7,022 MW	24,585 MW
Within 20 mi of Caramba North specifically	—	3,973 MW / 13 proj.
Nearest operating storage	St. Gall Energy Storage I — 1.9 mi, 103 MW BESS	—

SEC 2.6 Ring Analysis — Region-Wide Operating + Queued Capacity

32.7 GW sits within 60 miles of Caramba North — the property is inside the radius, not adjacent to it.

RADIUS	OPERATING + QUEUE
≤ 15 mi	0.5 GW
≤ 30 mi	8.9 GW
≤ 60 mi	32.7 GW
≤ 100 mi	53.5 GW

Region-wide EIA-860 operating + ERCOT-queue capacity within each radius of the Caramba North tract boundary — not county-bounded. See Fig. 2.6.

SEC 2.6 Project-Maturity Framing

STATUS	SHARE OF COMBINED ANCHOR MW
Under construction (GW Ranch)	79.3%
Planned / phase-1 (Longfellow)	20.7%

The regional pipeline anchored by the two profiled campuses (feature profiles below) is majority-built, not majority-speculative.

SEC 2.4 Water

Two-thirds of the district's industrial water rights are already permitted to this position — the water conversation is closed, not open.

WATER FACT	VALUE
Permitted volume	47,418 AF/yr
Permitted volume	42.3 MGD
Share of Middle Pecos GCD industrial rights	≈ 2/3
Source aquifer	Edwards-Trinity (Plateau)
Recharge record	Held through 1950s drought of record

SEC 2.5 Natural Gas

A signable 15-year gas quote at Waha basis — the same structural discount now drawing behind-the-meter generation to this corridor.

GAS FACT	VALUE
Distance to Waha hub	20 mi
Indicative supply quote	200,000 MMBtu/d
Term	15 yr, Waha-index
CIAC	\$15–25M
Lead time	9–15 mo

MACRO CONTEXT — ERCOT's large-load interconnection queue grew from 63 GW (end 2024) to ~474 GW of pending requests by Aug 2026 (~90% data-center-driven) — large enough that the Governor directed an audit of all ERCOT-queue data centers and paused the “Batch Zero” large-load review (public reporting, Aug 2026). The 32.7 GW within 60 mi of Caramba North sits inside that same queue.

SEC 2.6 Regional Data-Center / Power Pipeline — Feature Profiles

2.6.A GW Ranch (Amazon)

The largest air permit issued in the US this year sits fifteen miles up the same highway corridor — under construction, not announced.

GW RANCH FACT	VALUE
Site size	8,000 ac, Pecos County
Distance to Caramba North (edge-to-edge)	≈ 15.5 mi
Ownership	Amazon (disclosed Aug 2026)
Generation permit	7.65 GW TCEQ air permit (largest in US, issued Jan/Feb 2026)
Turbines	35 gas turbines
Storage / solar	1.8 GW battery; up to 750 MW solar
Data-center buildings	3 × 189,000 sf (Gensler); target Dec 2026
Estimated investment	≈ \$12B total project
Status	Under construction

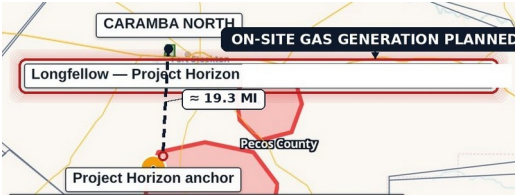

GW Ranch — ≈15.5 mi from Caramba North.
TCEQ air permit is a generation permit, not an ERCOT queue position; no disclosed ERCOT filing — site is off-grid initially.

2.6.B Longfellow

A second phased gas-generation campus twenty miles south — the corridor's demand for on-site power isn't one project deep.

LONGFELLOW FACT	VALUE
Site size	568 ac, Pecos County
Distance to Caramba North (edge-to-edge)	≈ 19.3 mi
On-site generation plan	Aero-derivative gas turbines, SCR + carbon-capture capable
Cooling	Closed-loop, permitted non-potable groundwater
Original scope (Oct 2025 announcement)	2 GW, 8 phases (250 MW/phase)
Status	Phase-1 site work underway; generation build planned in phases
ERCOT queue / TCEQ air permit on record	None found as of Aug 2026

Longfellow — ≈19.3 mi from Caramba North.
Longfellow's own public materials describe the site as "more than 25 mi outside Fort Stockton" — consistent with the longer edge-to-edge figure.

SEC 2.8 Subsurface — New-Drill Activity, Pecos County

Pecos County has the lowest new-drilling count of seven comparable Permian counties since 2020 — a 90%-below-peer-average level of activity, not merely “quiet.”

SUBSURFACE FACT	VALUE
New-drill wellbore events since 2020, Pecos County	115 of 1,140 total events (10%)
Share of Pecos events that are workovers/reworks	90%
New-drill wells within 2 mi of tract, since 2020	0
New-drill wells within 5 mi of tract, since 2020	0
New-drill wells within 10 mi of tract, since 2020	1 (9.37 mi)
New-drill wells beyond 10 mi, since 2020	114 (median 19.9 mi, mean 20.9 mi)
Non-plugged wellbores that are marginal/EOL, ≤ 10 mi	83% (vs. 60% ≤ 2 mi, 62% ≤ 5 mi)

SEC 2.8 Peer-County Comparison — New-Drill Count Since 2020

COUNTY	NEW-DRILL COUNT
Pecos (subject county)	115
Reagan	668
Howard	990
Reeves	1,053
Loving	1,121
Midland	1,569
Martin	1,685
Peer average (6 counties, excl. Pecos)	1,181

SEC 2.7 The Diligence Platform

Every figure in this document is independently re-derivable from a cited public source — this isn't a broker's summary.

PLATFORM FACT	VALUE
Source datasets	ERCOT GIS Report/TPIT, PUCT, EIA-860, TCEQ, RRC, FracFocus, Middle Pecos GCD, HIFLD, USGS, BTS, Census TIGER
Refresh cadence	RRC weekly; ERCOT queue/TPIT monthly; EIA/USGS/OSM annually
Build	Static, versioned; deployed bundle byte-verified on release; access logged
Access	lrp-tx-gis.netlify.app (credentials issued to deal team separately)

NOTICES
Confidential offering memorandum prepared for a limited number of prospective counterparties under NDA. Not an offer to sell or a solicitation of securities. Information is preliminary and indicative, from sources believed reliable. Public data is drawn from the sources listed under §2.7 above; third-party transaction news is sourced to public reporting cited in the companion source register.

Distance methodology: distances to GW Ranch and Longfellow are measured edge-to-edge, from the nearest point on the Caramba North tract boundary to each site's disclosed location, not centroid-to-centroid — consistently shorter given the tract's own spatial extent. GW Ranch: 15.5 mi (vs. 17.3 mi centroid). Longfellow: 19.3 mi (vs. 19.7 mi centroid); Longfellow's own public site states its location as more than 25 mi outside Fort Stockton, consistent with the longer figure — this distance should not be represented as shorter.
