

Energy & AI Infrastructure Deal-Terms Compendium

Per-unit economics across the physical power and compute stack — each sector priced in its native unit so the same question can be asked everywhere: **what does one unit of capacity transact for today?** Power leases in \$/MW and \$/MW-yr; generation fleets in \$/kW; nuclear and geothermal in \$/kW installed; compression in \$/hp; power purchases in \$/MWh and \$/MW-day; land in \$/acre; water in \$/AF, converted to barrels of water per day (bbl/d).

UPDATED THROUGH **JUNE 19, 2026** EXECUTED & ANNOUNCED TRANSACTIONS · PRIMARY SOURCES · N/D = NOT DISCLOSED

WHAT CHANGED RECENTLY

- **Gas-fleet consolidation closed.** NRG closed its \$12.0B / 13 GW gas-fleet purchase from LS Power (Jan 30, 2026; ~\$923/kW); Constellation closed its ~\$26.6B Calpine acquisition (2026), forming the largest U.S. generator (~60 GW); AES agreed to a \$33.4B take-private by GIP/EQT (Mar 2, 2026).
- **AI-lease stack repriced upward.** Cipher-AWS Black Pearl (\$5.5B / 15 yr / 300 MW) and Cipher-Fluidstack Barber Lake (→~\$9B with extensions) anchor a \$1.22–2.26M/MW-yr band; hyperscaler credit backstops (Google, AWS) are now standard.
- **Nuclear went from restarts to fleets.** Meta committed to up to 6.6 GW (Oklo/Vistra/TerraPower, Jan 9, 2026); DOE issued a \$26.5B Southern Co. financing (Feb 2026) and \$2.7B of enrichment task orders (Jan 6, 2026); Westinghouse's \$80B AP1000 fleet pledge (Oct 2025) implies ~\$7,300/kW vs Vogtle's realized ~\$16,500/kW.
- **Capacity scarcity priced in.** PJM's 2026/2027 auction cleared at the \$329.17/MW-day cap; North-America solar/wind PPAs rose to \$64.49 / \$79.40/MWh (LevelTen Q1 2026).
- **Late-window (Jun 13–19, 2026):** no major Texas land, lease, or fleet closings; activity was early-stage (Centrus-Oklo HALEU supply LOI Jun 18; CIM Grape 246 MWac solar+storage financing ~\$600M Jun 18; a cluster of geothermal venture rounds).

A Land & Power Leases

\$/MW · \$/MW-yr · \$/acre · \$/AF → bbl/d

The lease contract is the fundamental unit of value in AI infrastructure: a hyperscaler or neocloud tenant commits 10–15 years of rent against a landlord's powered shell, and that annual rent — **\$1.22–2.26 million per MW-year** across executed deals — sets the asset's worth more than the dirt beneath it. The defining 2025–26 feature is **credit support**: investment-grade backstops (Google for Cipher and TeraWulf; AWS as ultimate guarantor at Black Pearl) convert a former bitcoin miner's lease into financeable, near-utility cash flow. Land trades at a wide spread — from ~\$8,000/acre for raw municipal parcels bought ahead of the boom to \$480,000/acre to buy out an already-powered site — and water, increasingly the binding constraint, is benchmarked here in barrels per day.

A.1 AI / data-center power leases (colocation & hosting)

DATE	LESSOR → TENANT	SITE	GROSS MW	IT MW	CONTRACT \$	TERM	\$/MW-YR
Mar 28 2025	Galaxy → CoreWeave (Ph 1)	Helios, Dickens Co. TX	200	133	~\$4.5B	15 yr NNN	\$2.26M <i>IT</i>
Oct 28 2025	TeraWulf/Fluidstack JV	Abernathy, Lubbock Co. TX	240	168	~\$9.5B	25 yr	\$2.26M <i>IT</i>
Nov 20 2025	Cipher → Fluidstack (exp.)	Barber Lake, Colorado City TX	+56	+39	+\$830M	10 yr	\$2.13M <i>IT</i>

\$/MW-yr = initial-term contracted revenue ÷ term ÷ MW (IT or gross as marked). The market clears in a tight \$1.79–1.87M/MW-yr IT band for 10–15-yr deals; longer terms (TeraWulf Abernathy, 25 yr) and high-escalator deals reach \$2.26M. Galaxy bought Helios from Argo Blockchain (~\$65M, 2022); CoreWeave later committed the full 800 MW gross / 526 MW IT. Black Pearl: ~620-ac, 1 GW Colchis JV (~95% Cipher), AEP direct-connect, \$2.0B 6.125% notes (Feb 2026, due 2031), rent from Oct 1 2026, AWS ultimate guarantor. Excludes GPU compute-cloud contracts (IREN-Microsoft \$9.7B, Nebius-Microsoft \$17.4B) — those bundle GPU capex and are not real-estate leases.

DATE	LESSOR → TENANT	SITE	GROSS MW	IT MW	CONTRACT \$	TERM	\$/MW-YR
May 2025	Applied Digital → CoreWeave	Polaris Forge 1, Ellendale ND	<i>n/d</i>	~250	~\$7.0B	~15 yr	\$1.87M <i>IT</i>
May 6 2026	Hut 8 → IG hyperscaler	Beacon Point, Nueces Co. TX	<i>n/d</i>	352	\$9.8B (→\$25.1B)	15 yr, 3%	\$1.86M <i>IT</i>
Aug 14 2025	TeraWulf → Fluidstack	Lake Mariner, NY	~250	200+	~\$3.7B	10 yr	\$1.85M <i>IT</i>
Sep 25 2025	Cipher → Fluidstack	Barber Lake, Colorado City TX	244	168	~\$3.0B (→\$7B w/ext)	10 yr	\$1.79M <i>IT</i>
Jun 2024	Core Scientific → CoreWeave	multi-site (TX &c.)	<i>n/d</i>	~200	~\$3.5B (\$290M/yr)	12 yr	\$1.46M <i>IT</i>
Nov 3 2025	Cipher → AWS	Black Pearl, Wink TX	300	<i>n/d</i>	\$5.5B	15 yr (+3×5)	\$1.22M <i>gross</i>

\$/MW-yr = initial-term contracted revenue ÷ term ÷ MW (IT or gross as marked). The market clears in a tight \$1.79–1.87M/MW-yr IT band for 10–15-yr deals; longer terms (TeraWulf Abernathy, 25 yr) and high-escalator deals reach \$2.26M. Galaxy bought Helios from Argo Blockchain (~\$65M, 2022); CoreWeave later committed the full 800 MW gross / 526 MW IT. Black Pearl: ~620-ac, 1 GW Colchis JV (~95% Cipher), AEP direct-connect, \$2.0B 6.125% notes (Feb 2026, due 2031), rent from Oct 1 2026, AWS ultimate guarantor. Excludes GPU compute-cloud contracts (IREN-Microsoft \$9.7B, Nebius-Microsoft \$17.4B) — those bundle GPU capex and are not real-estate leases.

A.2 Credit support & lease structure

Google-Cipher: backstops \$1.4B of Fluidstack’s obligations (rising to ~\$1.73B with the Nov expansion) for ~24M warrants (~5.4% pro-forma). **Google-TeraWulf:** backstops \$1.8B (then +\$1.4B on the CB-5 expansion → ~\$3.2B total) for ~41M warrants (~14%). **AWS-Cipher:** ultimate guarantor of Black Pearl rent (per \$2B Black Pearl Compute LLC notes, Feb 2026, due 2031). Common terms: 10–15-yr initial, 3×5-yr extensions, ~3% annual escalators, triple-net. The backstops — not the miners’ own balance sheets — are what make these leases financeable.

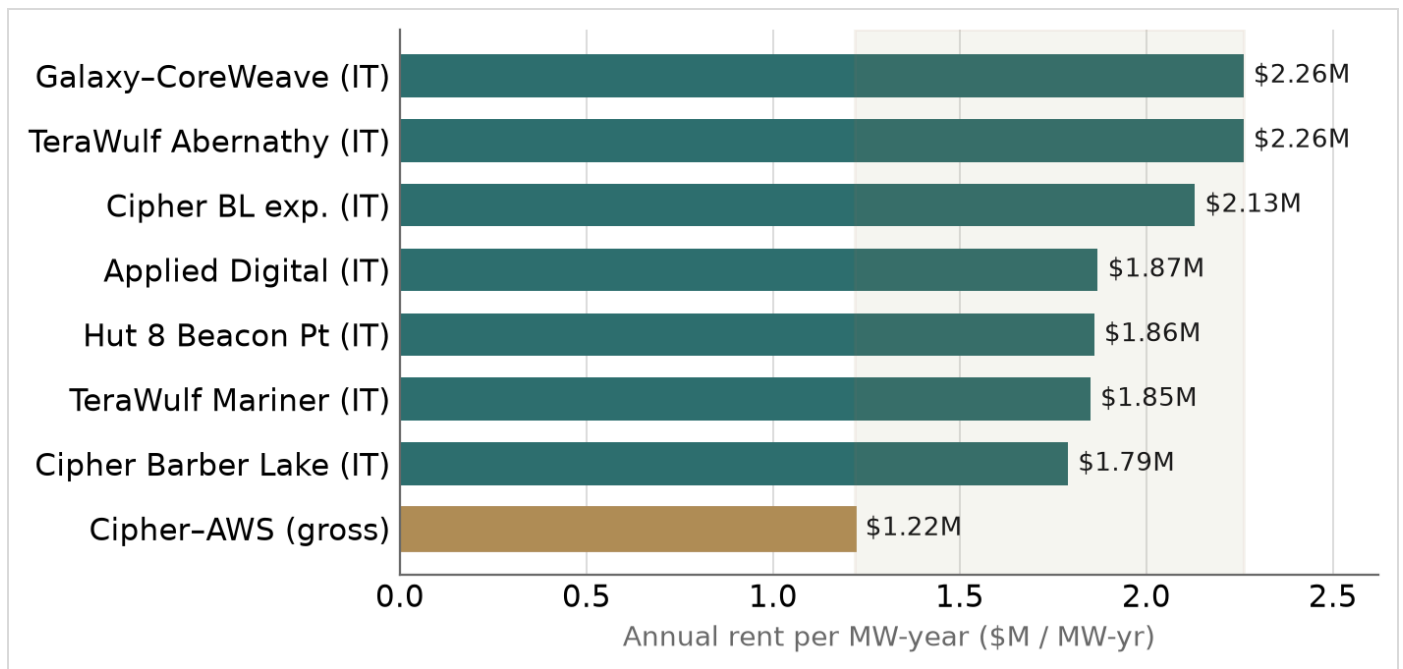

Fig. 1 — Annual rent per MW-year, executed AI/DC leases. Basis (critical-IT vs gross) marked per bar; band spans \$1.22M (Cipher-AWS, gross) to \$2.26M (Galaxy-CoreWeave & TeraWulf Abernathy, IT), clustering near \$1.8M for 10–15-yr deals.

A.3 Landlord contracted-revenue backlog

The miners’ pivot has produced multi-billion contracted backlogs — company-stated initial-term revenue, not market value. Applied Digital leads at ~\$36B base (\$86B with renewals; Jun 2026) across 1.4 GW / five campuses; Hut 8 reached \$16.8B after its 352 MW Beacon Point lease; TeraWulf \$12.8B (522 IT MW), Cipher ~\$11.4B, Core Scientific ~\$10.2B. (CoreWeave’s \$9B bid for Core Scientific was terminated Oct 30 2025; CORZ remains standalone.)

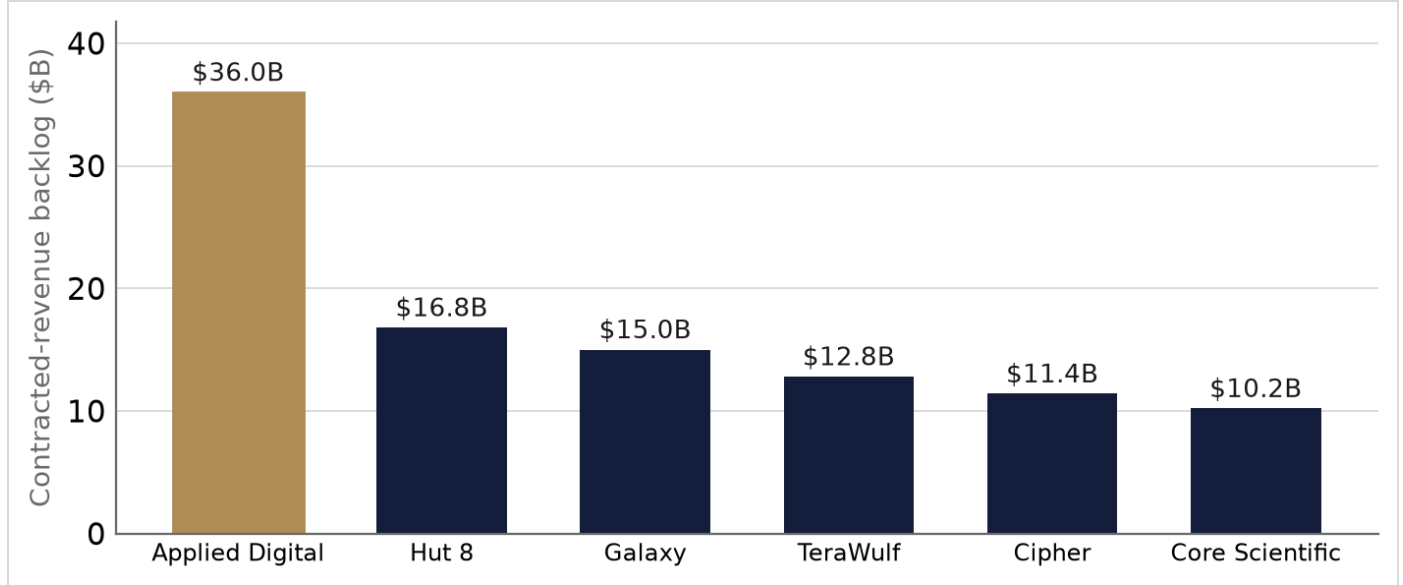

Fig. 2 — Contracted-revenue backlog (initial lease terms; company-stated except Galaxy, derived from >\$1B avg annual revenue × 15 yr). Figures as of Q1–Q2 2026.

A.4 Texas powered land — executed, ≤2 years

DATE	BUYER	SITE / COUNTY	ACRES	PRICE	\$/ACRE	POWER / NOTE
Jan 16 2026	Riot Platforms	Rockdale, Milam Co.	200	\$96.0M	\$480,000	fee-simple buyout of powered 700 MW site; AMD lease
2025	Blueprint	Taylor, Williamson Co.	87.97	\$10.0M	\$113,675	infill parcel from city EDC
Mar 17 2026	1606 Corp	Lufkin, Angelina Co.	132	\$11.2M <i>PSA</i>	~\$84,848	incl. warehouse + captive power; <i>PSA</i> , not yet closed
Dec 29 2023	Meta	NE El Paso, El Paso Co.	1,039	\$8.5M	~\$8,180	raw land from City; project announced Oct 2025
May 7 2025	Tract	Caldwell Co.	1,515	<i>n/d</i>	<i>n/d</i>	2 GW planned; 360 MW by 2028
~Apr 29 2025	Cawley Partners	South Creek Ranch, Dallas/Ellis	5,200	<i>n/d</i>	<i>n/d</i>	data-center ranch S. of Dallas
May 1 2026	Amazon Data Services	Cedar Creek, Bastrop Co.	≥1,300	<i>n/d</i>	<i>n/d</i>	"Creeside" parcels from CTX Capital
Jan 14 2026	CleanSpark	Brazoria Co.	447	<i>n/d</i>	<i>n/d</i>	600 MW AI/HPC campus (2nd TX site)
Dec 23 2025	New Era Energy & Digital	TCDC, Ector Co. (Odessa)	203	<i>n/d</i>	<i>n/d</i>	full ownership of TX Critical Data Centers
~2024	Google	Red Oak, Ellis Co.	165	<i>n/d</i>	<i>n/d</i>	\$600M project

Only four executed fee-simple deals carry a true \$/acre; mega-acreage assemblages and ground-lease structures are price-undisclosed. Powered land that traded via lease/option (no \$/acre): LandBridge–PowerBridge Reeves Co. (option, up to 3,400 ac, 2 GW, Apr 2026); Fermi America "HyperGrid" Carson/Potter Co. (5,800 ac, 11 GW incl. 4 GW nuclear); Vantage "Frontier" Shackelford Co. (1,200 ac, 1.4 GW, \$25B); IREN Sweetwater (2,200 ac, 2 GW); Poolside/CoreWeave "Project Horizon" Pecos Co. (568 ac; CoreWeave lease terminated Mar 2026); Crusoe ground-lease at Lancium Clean Campus, Abilene (Stargate Site 1).

A.5 Water — volumes in barrels per day

Conversions: 1 acre-foot = 7,758 bbl; 1 AF/yr ≈ 21.3 bbl/d; 1 million gal = 23,810 bbl. Water is moving from afterthought to gating constraint; the cleanest disclosed Texas price is the Vista Ridge / SAWS groundwater contract at **\$460/AF** raw (\$2,300/AF all-in delivered).

DEAL / SITE	COUNTY / SOURCE	VOLUME (NATIVE)	BBL/D	DATE
Sandow Lakes Ranch — permitted	Milam/Lee, Simsboro Aquifer	44,000 AF/yr	~937,200	pre-2024
Sandow Lakes — additional permittable	Milam/Lee	14,000 AF/yr	~298,200	2024
San Antonio DCs (Microsoft + Army Corps)	Bexar Co.	463M gal '23–24	~15,100	2023–24

Vista Ridge is the cleanest disclosed Texas groundwater price benchmark: \$460/AF raw (10% landowner royalty = \$46/AF), ~\$2,300/AF all-in delivered. Sandow also holds 48,379 AF in storage (~375M bbl one-time). Vantage "Frontier" runs closed-loop, near-zero water-use-effectiveness (volume n/d).

DEAL / SITE	COUNTY / SOURCE	VOLUME (NATIVE)	BBL/D	DATE
Comanche Circle DC — ongoing	Hood Co.	150,000 gal/d	~3,572	Jun 2 2026
Stargate Abilene — initial fill	Taylor Co. (closed-loop)	8M gal one-time	~190,480 <i>one-time</i>	2025
Benchmark — mid-size DC	—	~300,000 gal/d	~7,140	—
Benchmark — large DC	—	~4.5M gal/d	~107,145	—
TX data-center fleet (today)	statewide	~25B gal/yr	~1.63M	2025
Vista Ridge / SAWS — \$460/AF raw	Burleson Co., Simsboro/Carrizo	50,000 AF/yr	~1.07M	\$3.4B / 30 yr

Vista Ridge is the cleanest disclosed Texas groundwater price benchmark: \$460/AF raw (10% landowner royalty = \$46/AF), ~\$2,300/AF all-in delivered. Sandow also holds 48,379 AF in storage (~375M bbl one-time). Vantage "Frontier" runs closed-loop, near-zero water-use-effectiveness (volume n/d).

B Power Generation Fleet M&A \$/kW of capacity

Operating thermal fleets are changing hands at ~**\$900-1,320/kW** — roughly 40-65% of new-build CCGT replacement cost (~\$2,000-2,500/kW) — as buyers race to own existing, interconnected capacity rather than wait years to build it. NRG explicitly framed its LS Power buy at 50% of replacement cost; Talen and NRG both cited mid-single-digit EV/EBITDA multiples.

DATE	BUYER → SELLER / TARGET	CAPACITY	EV / PRICE	\$/KW	NOTE
closed 2026	Constellation → Calpine	~27 GW gas+geo	~\$26.6B EV	~\$985	\$16.4B equity; combined ~60 GW (largest U.S. generator); ann. Jan 10 2025
Jan 30 2026	NRG → LS Power	13 GW gas (+6 GW VPP)	\$12.0B EV	~\$923	7.5× 2026 EV/EBITDA; ~50% of new-build cost; doubles NRG fleet
Nov 25 2025	Talen → Freedom + Guernsey	2,881 MW CCGT	\$3.8B gross	~\$1,319	6.7× 2026 EV/EBITDA; PJM; discount to new-build CCGT
Mar 1 2024	Vistra → Energy Harbor	4,000 MW nuclear	~\$3.4B	~\$850	+~1M retail customers (so \$/kW overstates generation-only)

\$/kW = EV ÷ MW ÷ 1,000. Fleet \$/kW is a gross headline metric; nuclear (Vistra) and gas (NRG, Talen) are not directly comparable to one another. See Section E for nuclear new-build \$/kW (~\$16,500/kW at Vogtle) — the gulf to ~\$900/kW fleet deals is the core "buy vs build" arbitrage.

C Solar & Storage \$/MWh PPA · \$/kW installed

Renewable PPAs are the marginal procurement tool for data-center load, and prices are rising on policy uncertainty, permitting bottlenecks, and that very demand. The clean price signal is the LevelTen index; project financings give a \$/kW-installed read where solar and storage are bundled.

DATE	BENCHMARK / DEAL	SIZE	PRICE / VALUE	UNIT PRICE	SOURCE BASIS
Q1 2026	LevelTen N. America solar PPA (P25)	—	—	\$64.49/MWh	+13% YoY; +4.6% QoQ
Q1 2026	LevelTen N. America wind PPA (P25)	—	—	\$79.40/MWh	+~24% YoY
Jun 18 2026	CIM Group / Permanent Power — Grape	246 MWac solar + 150 MWac BESS	~\$600M fin.	~\$2,435/kWac <i>blended</i>	construction financing; IG offtaker PPA (price n/d)
Jun 17 2026	Chrysalis (Morrison) ← Hanwha (Atlas V/VI)	357 MWdc	<i>n/d</i>	<i>n/d</i>	AZ; 15-yr PPAs with SCE
Jun 17 2026	Nautilus Solar — debt facility	~200 MW community	\$600M	<i>n/d</i>	construction debt renewal (bank syndicate)

PPA \$/MWh is the comparable price; project-financing \$/kW blends solar + storage and reflects financing size, not all-in capex. Texas-specific solar PPAs in June 2026 (Meta-RWE 298 MW; Meta-Zelestra 180 MWdc) fell just outside the dateline window.

D Geothermal \$/kW installed

Next-gen geothermal is the only firm, 24/7 clean resource attracting hyperscaler offtake at scale. PPA prices are universally undisclosed; the one disclosed capex curve is Fervo's Cape Station, falling from **\$7,000/kW** (Phase 1) toward a \$3,000/kW target as drilling repeats.

DATE	PROJECT / DEAL	MW	VALUE	\$/KW	OFFTAKE
2025-26	Fervo — Cape Station (Utah)	500	capex n/d	\$7,000 → \$5,500	Ph1 \$7,000/kW, Ph2 \$5,500/kW, target \$3,000/kW; all 500 MW contracted
Jun 28 2024	Fervo → Southern California Edison	320	n/d	\$/MWh n/d	two 15-yr PPAs (largest geothermal PPA)
Aug 2024	Sage Geosystems → Meta	up to 150	n/d	\$/MWh n/d	geopressured; Phase 1 target 2027
Jun 12 2025	XGS Energy → Meta	150	n/d	\$/MWh n/d	New Mexico, via PNM; online by 2030
Feb 17 2026	Ormat → Google	up to 150	n/d	\$/MWh n/d	NV Energy clean-transition tariff; 2028-30

Fervo financings (context, not \$/kW): \$462M Series E (Dec 2025, Google/CalSTRS/B Capital); \$421M non-recourse project financing (Mar 19 2026). Total project capex undisclosed, so no project-level \$/kW is computable beyond the company's stated curve.

E Nuclear \$/kW installed

Nuclear spans an order of magnitude in \$/kW: greenfield AP1000 (Vogtle) landed at **~\$16,500/kW**; first-of-kind SMRs pencil at ~\$8,000-11,600/kW; Westinghouse's \$80B fleet pledge bets scale drives that to **~\$7,300/kW**; and plant **restarts run ~\$1,900/kW** — the cheapest new firm megawatts available. Hyperscaler PPA prices (\$/MWh) are undisclosed across every deal below.

DATE	DEAL / PROJECT	MW	COST / VALUE	\$/KW	BASIS
2023-24 COD	Vogtle 3 & 4 (new-build)	2,234	~\$36.8B	~\$16,500	realized all-in (regulated rate base)
Mar 9 2026	TerraPower Natrium — Kemmerer	345 / 500 pk	~\$4.0B	~\$11,600 <i>FOAK</i>	NRC permit; DOE ARDP 50/50; Meta offtake (Jan 2026)
Oct 27 2025	Westinghouse AP1000 fleet pledge	~11,000 <i>indic.</i>	≥\$80B	~\$7,300 <i>indic.</i>	US Gov + Brookfield + Cameco; 10×AP1000 (unit count n/d)
Nov 18 2025	Crane / TMI-1 restart (Constellation)	835	~\$1.6B	~\$1,916	capex; DOE \$1B loan; Microsoft 20-yr PPA (2024)
2024-25	Palisades restart (Holtec)	800	\$1.52B	~\$1,900	DOE loan guarantee basis

DATE	OFFTAKE / AWARD	MW	TERM / VALUE	COUNTERPARTIES & NOTE
Jan 9 2026	Meta multi-developer nuclear	up to 6,600	20-yr PPAs	Vistra (~2.6 GW) + Oklo (~1.2 GW) + TerraPower (~2.8 GW); \$/MWh n/d
Jun 11 2025	AWS → Talen (Susquehanna)	1,920	through 2042	front-of-meter ramp to 2032; prior 960 MW campus \$650M (2024)
Jun 3 2025	Meta → Constellation (Clinton)	1,121	20 yr	relicensing; \$/MWh n/d
Oct 16 2024	Amazon → X-energy (SMR)	320 → 960	~\$500M inv.	Cascade, WA (Energy Northwest); Xe-100 ×4-12
Oct 14 2024	Google → Kairos Power (SMR)	up to 500	offtake	6-7 reactors; first ~2030; Hermes 2 50 MW PPA via TVA (Aug 2025)

DOE 2025-26 nuclear actions: \$26.5B Southern Co. financing (Feb 2026, multi-asset); \$2.7B uranium enrichment task orders (Jan 6 2026, \$900M each to ACO/General Matter/Orano); \$800M Gen III+ SMR cost-share (TVA + Holtec, Dec 2 2025); Reactor Pilot Program (Aug 2025, \$0 federal — authorization pathway only). Late-window: Centrus-Oklo HALEU supply LOI (Jun 18 2026).

F Utilities & Infrastructure M&A EV · stake · multiple

The dominant 2023-26 pattern is the **~19.9% minority stake** sold to an infrastructure fund — structured to fund enormous capex plans while keeping operating control and dodging change-of-control review — alongside outright take-privates. Issuers disclose P/E or rate-base multiples, not premium-to-rate-base (n/d throughout).

DATE	BUYER → TARGET	STAKE	PRICE	IMPLIED EV	MULTIPLE / NOTE
Mar 2 2026	GIP + EQT → AES Corp	100%	\$15.00/sh	\$33.4B	take-private (all-cash)
Sep 23 2025	KKR + CPP → Sempra Infrastructure	45%	\$10.0B	~\$31.7B	LNG/Mexico infra (not regulated utility)
May 19 2025	Blackstone Infra → TXNM Energy	100%	\$61.25/sh	\$11.5B	take-private; 23% premium to VWAP; PNM + TNMP (TX)
Aug 5 2025	Brookfield → Duke Energy Florida	19.7%	\$6.0B	~\$30.5B	staged 2026-28; funds \$87B capex plan

Also: Dominion sold its Ohio/Utah/North Carolina gas utilities to Enbridge for ~\$14B total EV (closed through Oct 2024). Oncor saw no equity transaction; the Sempra-level KKR/CPP deal funds Oncor capex without transferring its equity.

DATE	BUYER → TARGET	STAKE	PRICE	IMPLIED EV	MULTIPLE / NOTE
Oct 21 2025	National Fuel → CenterPoint Ohio gas	100%	\$2.62B	—	~1.9× rate base (rate base ~\$1.38B)
Jun 5 2025	KKR + PSP → AEP transcos (OH, I&M)	19.9%	\$2.82B	—	30.3× LTM P/E; AEP Texas excluded
Jan 2 2024	Blackstone Infra → NIPSCO (NiSource)	19.9%	\$2.15B	~\$14.3B	+\$250M capex commitment
Apr 1 2025	Bernhard/Delta → CenterPoint LA+MS gas	100%	\$1.2B	—	~32× 2023 LDC earnings

Also: Dominion sold its Ohio/Utah/North Carolina gas utilities to Enbridge for ~\$14B total EV (closed through Oct 2024). Oncor saw no equity transaction; the Sempra-level KKR/CPP deal funds Oncor capex without transferring its equity.

G Gas Compression

\$/horsepower

Contract compression — the backbone of Permian gas gathering and increasingly of behind-the-meter power for data centers — consolidated hard in 2024. The clean per-unit comp is Archrock's TOPS purchase at ~**\$1,695/hp** for young electric-drive fleet.

DATE	BUYER → TARGET	HORSEPOWER	VALUE	\$/HP	NOTE
Q4 2024	Archrock → TOPS	580,000	\$983M	~\$1,695	electric motor-drive; Permian; cash+stock
Apr 1 2024	Kodiak → CSI Compressco	4.3M <i>combined fleet</i>	\$854M	<i>deal n/d</i>	all-equity (incl. \$619M net debt); largest contract fleet

\$/hp = value ÷ horsepower. On TOPS's ~500,000 operating hp the figure is ~\$1,966/hp. The Kodiak-CSI per-unit \$/hp is n/d because CSI's standalone fleet horsepower is not separately disclosed (4.3M hp is the post-deal combined fleet, >2.8M in the Permian).

H Transmission

\$/mile · program capex

Transmission rarely produces clean asset-trade comps; the market is expressed instead as multi-billion buildout programs and financings. The closest per-unit reads come from line-build commitments.

DATE	PROGRAM / FINANCING	SCOPE	VALUE	\$/MILE	NOTE
2025	AEP Transmission — DOE loan guarantee	~5,000 mi upgrade	\$1.6B	~\$320k <i>loan basis</i>	IN/MI/OH/OK/WV; rebuild/upgrade
2025-26	Grain Belt Express (Invenergy)	800-mi HVDC	~\$11B+ <i>project</i>	<i>n/d</i>	\$1.7B contractor awards (Quanta, Kiewit); largest US line
2026	PJM RTEP expansion plan	multi-project	\$11.8B	<i>n/d</i>	board-approved; load-growth driven
2025-26	ERCOT STEP / Permian reliability	statewide / W. TX	~\$33B / ≥\$13B	<i>n/d</i>	regulated capex (not M&A)

These are buildout/financing commitments, not asset acquisitions; \$/mile shown only where directly derivable (AEP loan ÷ miles). The 19.9% AEP transco stake sale to KKR/PSP (Section F) is the nearest thing to a transmission asset-price comp.

I Power Market

\$/MWh energy · \$/MW-day capacity

The wholesale signals that underwrite every deal above: PJM capacity hit its administrative cap on load-growth scarcity, while ERCOT energy stays moderate on average with a fattening high-price tail.

DATE	MARKET / INDEX	PRICE	NOTE
2026/2027	PJM Base Residual Auction (capacity)	\$329.17/MW-day	cleared at FERC-approved cap, footprint-wide
2025/2026	PJM Base Residual Auction (capacity)	\$269.92/MW-day	prior-year reference
2025	ERCOT wholesale energy (avg)	~\$30-36/MWh	North hub ~\$35.88 (Dec 2025); scarcity in upper tail
Q1 2026	LevelTen N. America solar PPA (P25)	\$64.49/MWh	see Section C
Q1 2026	LevelTen N. America wind PPA (P25)	\$79.40/MWh	see Section C

PJM capacity at the cap signals acute load-growth-driven scarcity (data centers); ERCOT's moderate average masks a widening tail of >\$500/MWh intervals during peak demand — the volatility that makes firm, dispatchable capacity (Sections B, E) valuable.

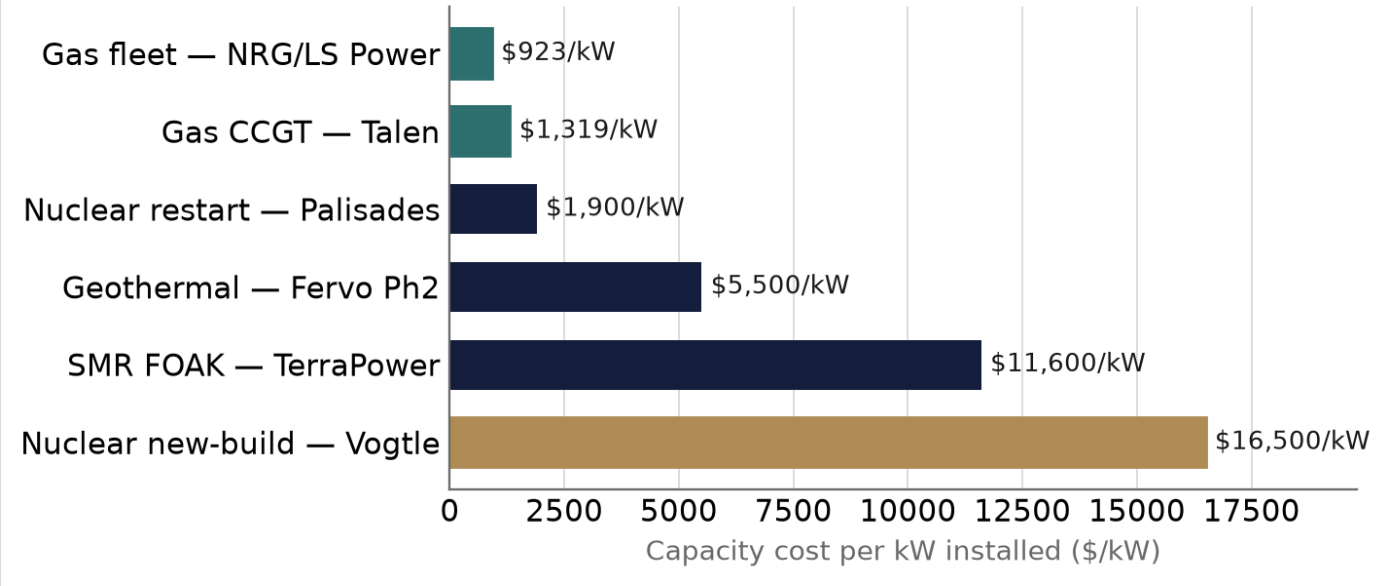

Fig. 3 — What one kW of firm capacity costs across the stack: operating gas fleets and nuclear restarts are an order of magnitude cheaper per kW than greenfield nuclear (Vogtle). Sources: Sections B, D, E.

READ-THROUGH ACROSS THE STACK

One pattern recurs at every layer: the scarce, financeable unit is **firm, interconnected capacity under long-term contract**, and its price is climbing. An AI lease throws off \$1.22–2.26M/MW-yr once a hyperscaler’s credit backstops it; an operating gas fleet trades at ~\$900–1,320/kW, less than half of new-build; a nuclear restart delivers firm megawatts at ~\$1,900/kW versus ~\$16,500/kW to build them new; PJM capacity clears at its cap. The cheapest path to a contracted megawatt is almost never greenfield construction — it is buying, restarting, or re-leasing capacity that already exists and already touches the grid.

Land and water are the gating inputs, not the value. Powered Texas dirt spans ~\$8,000/acre (raw, pre-boom) to \$480,000/acre (to capture an energized site), and the constraint increasingly binds on water — benchmarked here at \$460/AF (Vista Ridge raw) and in barrels per day — rather than on acreage.

\$1.22-2.26M AI LEASE, PER MW-YEAR	~\$900-1,320 GAS FLEET, PER KW	~\$1,900/kW NUCLEAR RESTART VS ~\$16,500 NEW-BUILD	\$329.17 PJM CAPACITY, PER MW-DAY (CAP)	\$460/AF VISTA RIDGE RAW GROUNDWATER

Methodology. Executed and announced transactions from primary and named sources only. Per-unit figures are computed from disclosed totals (formula shown per section); “n/d” marks any figure not disclosed and is never estimated. Water conversions: 1 acre-foot = 7,758 bbl; 1 AF/yr ≈ 21.3 bbl/d; 1 million gallons = 23,810 bbl. Internal use; not investment advice.

AI/DC leases & land: Cipher Mining 8-Ks & PRs (Sep 25, Nov 3, Nov 20 ‘25; Black Pearl Compute notes Feb ‘26); Galaxy Digital PR (Mar & Aug 15 ‘25), Delphi Digital; TeraWulf PRs/8-K (Aug 14 & 18 ‘25); Applied Digital IR/8-K (Q3 FY26); Riot GlobeNewswire (Jan 16 ‘26); Tract GlobeNewswire (May 7 ‘25); Amazon/Bastrop & Cawley (The Real Deal); Meta El Paso (about.fb.com, City of El Paso); 1606 Corp PR (Mar 17 ‘26); CleanSpark, New Era, Google (DCD/TAMU TRERC); Fermi America (ANS); Poolside/CoreWeave; IREN.

Water: POSGCD/Sandow filings; Crusoe/Stargate Abilene tour; San Antonio Current; Texas Tribune (Hood Co., Jun 2 ‘26); SAWS Vista Ridge.

Generation & utilities: Constellation, NRG, Talen, Vistra 8-Ks/PRs & Utility Dive; Blackstone, KKR, Brookfield, GIP/EQT, National Fuel, Bernhard, Dominion/Enbridge releases & SEC 8-Ks.

Solar, geothermal, nuclear: LevelTen Q1 2026 PPA Index; CIM/Permanent Power, Nautilus, Chrysalis (Business Wire); Fervo, Sage, XGS, Ormat releases & Utility Dive; DOE/energy.gov, World Nuclear News, ANS, POWER; Constellation, Talen, Meta, Amazon, Google, Westinghouse/Cameco/Brookfield releases & SEC filings.

Compression, transmission, power market: Archrock & Kodiak 8-Ks/PRs; AEP, Invenergy Grain Belt Express, PJM RTEP, ERCOT releases; PJM RPM auction reports (2026/27, 2025/26); EIA STEO/ERCOT system-wide prices.
