

CONFIDENTIAL · PARTNERSHIP INTELLIGENCE

Occidental Petroleum ✕ Caramba North

Portfolio, Permian & Pecos footprint, data-center-adjacent capabilities, deal comps, and a counterparty briefing — for the collaboration arising from the Williams-farm mineral / surface negotiation.

Prepared 19 June 2026 · Land Resource Partners · Pecos County, Texas

Sources: SEC filings & earnings · 1PointFive / OXY / WES / TPL press · DOE / EPA · the LRP Texas Energy GIS map

The situation, and OXY's pivot

- **Caramba North** — ~1,300 ac, Pecos County — under evaluation to repurpose for a **hyperscale data center**.
- Site control requires the **shallow mineral estate (0–5,000 ft)** and the **working interest** — to remove drilling / vibration risk on the surface.
- On the Williams farm: **minerals = OXY** · **working interest = Chevron**.
- OXY declined a cheap waiver — **correctly**: a data center runs ~\$40B all-in per GW, so the mineral line item is immaterial to the hyperscaler's stack — and instead proposed a **broader partnership** across CCS, produced-water desalination, power, and its basin-wide minerals / working interests / fee lands.

"Partner up, trade market intelligence, collaborate." — OXY's counter

OXY is the most multi-dimensional partner in this geography

01 · CARBON

A turnkey net-zero data center

1PointFive runs the world's only utility-scale DAC plant and the largest hyperscaler carbon-removal contract on record (Microsoft). Bundle: gas power + point-source CCS + DAC offtake. **Google & Meta haven't signed — the opening.**

02 · POWER + CCS

Infrastructure inside Pecos

A ~\$1.1B gas/CO₂ complex literally in Pecos County, a CO₂ pipeline spine (Bravo/Cortez), and a proven gas-to-power template (Project Horizon, Longfellow Ranch).

03 · WATER

Cooling without the freshwater fight

Produced-water recycling at scale plus TerraLithium brine-treatment and a WES desal pilot — the path to non-potable cooling in water-scarce Pecos.

Capital posture

Berkshire-anchored

Debt

~\$23B → \$13.3B

Implication

Patient · multi-decade

OXY at a glance

METRIC	FY2024	FY2025	Q1 2026
Total revenue	\$26.9B	\$22.1B	\$5.7B
Net income to common	\$2.4B	\$1.6B	\$3.2B*
Operating cash flow	\$11.7B	\$10.5B	~\$1.4B
Production (MBOE/d)	1,327	1,434	1,426
Capex	\$6.8B	\$7.3B	\$1.5B

*Q1'26 includes a +\$3.1B gain on the OxyChem sale; continuing -ops ≈ \$1.07B. OXY does not report EBITDA.

Permian standing

~#4 producer · ~2.8–2.9M net ac

CO₂-EOR

#1 · 34 projects · ~20 Mt/yr

Berkshire Hathaway

~26.6% + \$8.5B 8% pfd

Carbon management — the marquee asset

- **STRATOS** (Ector Co.) — the **world's largest DAC**: up to 500k t CO₂/yr, ~\$1.3B, BlackRock \$550M JV, first-ever EPA Class VI DAC permits (Apr 2025).
- **South Texas DAC hub** — King Ranch (Kleberg): 106k ac, ~3 Bt storage, **DOE up to \$500M**, ADNOC/XRG up to \$500M.
- **Carbon Engineering** — acquired ~\$1.1B (2023); the DAC IP behind both.

Google & Meta have not signed 1PointFive — LRP relationships can help close it.

CARBON-REMOVAL OFFTAKE

BUYER	VOLUME
Microsoft — largest-ever; AI emissions	500k t
Amazon	250k t
Airbus	400k t
AT&T · TD · JPMorgan · Trafigura	various

45Q is \$85/t for saline sequestration; OXY also backs NET Power — the template for **CCS on gas-fired data-center power**.

In-basin power & CCS — inside the county

- **Century gas / CO₂ complex — Pecos County:** ~\$1.1B, 800 MMcf/d treating, **the largest single-source industrial CO₂ capture in North America**, routing ~5–8 Mt/yr CO₂ to EOR. OXY infrastructure, ROW, water-handling and personnel adjacent to Caramba.
- **CO₂ pipeline spine** — Bravo (218 mi) + Cortez (500 mi, 1.5 Bcf/d): a ready transport network for any CCS-on-power scheme.
- **Gas-to-power template** — Project Horizon (Longfellow Ranch, Pecos): on-site turbines fed from OXY/Targa gathering. (CoreWeave anchor lapsed — a proven template, not a live reference.)
- **Goldsmith solar** (Ector, 16–20 MW) — OXY power self-supply.

Produced-water treatment & desalination

- The Permian produced **>20 MMbbl/d of water in 2024** (→ >26 by 2030). OXY is a top-tier handler.
- **Recycling at scale** — South Curtis Ranch >50 MM bbl reused; Lost Tank (NM) up to 180k bbl/d.
- **TerraLithium** direct-lithium-extraction (a brine-treatment train) + BHE JV — **transferable to desalinating produced water** into non-potable cooling makeup.
- **WES Reeves-County desal pilot** — ~1,000 bbl/d reclaimed freshwater, a county over from Pecos.

Why it matters: treated produced water is the only scalable cooling source in Pecos that doesn't compete for Edwards-Trinity / Pecos Valley freshwater. A pilot here is a natural first joint project.

OXY's footprint — from the LRP map's own data

- ▲ Gas / CO₂ plants — Century · Block 31 · Wasson
- Solar — Goldsmith (Ector)
- OXY field substations — Cogdell · N. Cowden · Curtis Ranch · Welch
- Caramba North — subject site

Plus **Santa Garcias Solar, 265 MW** (Oxy Renewable Energy LLC) in **Kleberg County** (South Texas) — co-located with the 1PointFive King Ranch DAC hub, ~480 mi SE.

Every point is a live record extracted from the LRP map layers (ERCOT, EIA-860, OSM, HIFLD/EIA) — independent corroboration that OXY operates across this exact geography.

What the LRP map already shows about OXY

MAP LAYER	OXY RECORD	WHERE
ERCOT interconnect queue	Santa Garcias Solar , 265 MW — Oxy Renewable Energy LLC	Kleberg
Solar / EIA-860	Goldsmith solar farm	Ector
Power plants (EIA-860)	Wasson CO ₂ Removal — Occidental Permian Ltd	Yoakum
Substations (OSM)	Century Plant Substation — Occidental Petroleum, 138 kV	Pecos
ERCOT TPIT (planned grid)	Solstice–Hayter 138 kV rebuild — beside Caramba	Pecos
NG processing (HIFLD/EIA)	Block 31 plant — Owner: Oxy	Crane
Tax abatements	Ingleside OxyChem / Oxy terminal	San Patricio
FracFocus completions	OXY-family — see footprint chart	basin-wide

OXY completion footprint — heavy around Pecos, light inside it

FracFocus disclosures, OXY-family (Occidental + Anadarko + CrownQuest). ★ = subject county.

OXY drills heavily in the abutting Delaware counties (Reeves, Ward, Loving) but is light inside Pecos proper (24). That's the profile of a royalty / fee owner, not an active operator of the shallow column under the tract — which is exactly what makes a shallow-rights waiver / subordination tractable.

Deal comps & negotiation framing

- **OXY already contributes surface to a Permian DC-power project.** Chevron's 2.5→5 GW, ~\$7B AI-power campus (Pecos/Reeves; Microsoft offtaker) reportedly sits on land from **TPL, Oxy USA & WaterBridge**. (single source — verify in county records.)
- **Texas law** — the mineral estate is dominant; the accommodation doctrine is weak (Lyle v. Midway Solar, a Pecos case) → a **negotiated waiver / subordination** from OXY + Chevron is required.
- **Benchmarks** — TPL: \$169M = 4,106 royalty ac (~\$41k/ac) + 4,120 surface ac (~\$41k/ac); producing Permian minerals \$2–8k+/ac.
- **Framing** — at ~\$40B/GW, a shallow-mineral buyout + waiver is a rounding error. **Leverage is alignment, not the doctrine.**

The OXY team — all Land / commercial

David Woest

Director, Surface Land

Owns surface-use agreements, ROW & easements — the function that papers a Caramba surface deal.

Hook: surface-rights craft — "what should we get ahead of on the ground?"

John Cranfill

Sr. Director, Business Development — US Onshore & Carbon Mgmt

The commercial bridge between OXY's upstream and its CCUS strategy — the strategic node for this deal.

Hook: UT Austin (pet-eng → CCUS pivot).

Jeff Noto

Land Team Lead · ex-Sr. Negotiator, Oxy Low Carbon Ventures

Has negotiated land for OXY's low-carbon projects — knows how to assemble a clean footprint.

Hook: OLCV land-assembly craft. (Not the Zayo CFO.)

Sourcing note

Public-source, confidence-marked · personal details not improvised · safest rapport = Cranfill's UT Austin + craft-respect for Woest & Noto

Caveats — price these in before any term sheet

- **OxyChem is divested** (→ Berkshire, \$9.7B) — the chemicals / water-treatment-chemical angle now runs through Berkshire, not OXY.
- **Western Midstream may be sold** — confirm OXY still controls WES before counting its water / pipeline / ROW network.
- **OXY is not a TPL-style West-Texas fee empire** — its big land-grant estate was the Rockies (sold 2020); it's been a net seller in the TX Delaware. Your title work on the Williams tract stands — just don't extrapolate it county-wide.
- **Verify** — the Oxy-USA / Chevron-campus land comp (single source) and the verbatim 10-K surface / sequestration risk language.

Putting it on the map — & the moves

LRP GIS MAP

- **oxy_assets** — built & verified (9 OXY assets), staged on PR #19.
- **oxy_drilling_permits** — RRC W-1 filtered to OXY.
- **oxy_minerals_pecos** — StratMap parcels: OXY's actual "position in Pecos."

Live map · lrp-tx-gis.netlify.app

RECOMMENDED MOVES

- Press the **Google / Meta CDR gap** — bring OXY a hyperscaler it hasn't signed.
- Scope a **Pecos produced-water desal pilot** + a gas-to-power-with-CCS package as the first joint project.
- **Quantify OXY's Pecos minerals** from county / RRC records (the minerals map layer).
