

9.65 GW

of announced hyperscale capacity sits within 19.3 miles of the property – 7.65 GW of it already under construction.

Two campuses sit on the same north-south line through the tract. The larger is Amazon-owned and building now under the largest generation air permit issued in the United States this year. The site is 1,300 contiguous acres on Interstate 10 with no zoning ordinance to clear.

WITHIN 60 MI

Caramba North

1,300 contiguous acres · I-10 frontage · no zoning

★ 1 Amazon — 7.65 GW

15.5 mi · under construction · TCEQ air permit

2 Second announced campus

19.3 mi · phase-1 site work · 2 GW planned on-site gas

Counterparty site names withheld pre-NDA. Distances measured edge-to-edge from the tract boundary to each site's disclosed location.

The power, water and gas positions are permitted, not proposed.

The constraint that stops most large-load sites – interconnection, water, or fuel – is already resolved here, and the corridor around it is being built by someone else’s capital.

TRANSMISSION

Fifteen miles from the delivery point of all three approved 765 kV Permian import lines.

Distance to 765 kV import terminus	15 mi
PUCT approval	Docket 55718
Substations within 10 miles	6
ERCOT weather zone	Far West

WATER & NATURAL GAS

Two-thirds of the district’s industrial water rights are already permitted to this position.

Permitted water, adjacent lands	47,418 AF/yr
Equivalent	42.3 MGD
Distance to Waha gas hub	20 mi
Indicative supply quote in hand	200,000 MMBtu/d

SITE & SUBSURFACE

Pecos County has the lowest new-drilling count of seven comparable Permian counties since 2020.

Max contiguous acreage	1,300 ac
Zoning	None – as-of-right
New-drill events since 2020	115
Peer-county average	1,181

AVAILABLE UNDER NDA

Counterparty names and site boundaries, the full transmission and water documentation, indicative gas terms, and the underlying GIS platform – every figure above is re-derivable from cited public data.

STATE CONTEXT

ERCOT’s large-load queue grew from 63 GW at the end of 2024 to roughly 474 GW of pending requests by August 2026, about 90% data-center-driven — enough to trigger a state audit and a pause on new large-load review. The capacity already permitted and under construction around this site sits outside that queue.
