

# Caramba North

---

1,300 acres on I-10 in Pecos County, Texas — inside a power and data-center corridor where 79.3% of nearby announced capacity is already under construction.

# 1,300 acres

Contiguous, on the north side of I-10, with no zoning ordinance in force.

Industrial and energy use is as-of-right. What governs the schedule here is construction, not entitlement.

ERCOT'S HIGHEST LOAD-GROWTH ZONE

32.7 GW

of operating and ERCOT-queued capacity sits within 60 miles.

Caramba North is inside that radius, not adjacent to it: 0.5 GW within 15 miles, 8.9 GW within 30, 53.5 GW within 100.

Operating + ERCOT-queued capacity by radius  
Cumulative, region-wide • EIA-860 + ERCOT queue

GW Ranch sits due north, Longfellow due south — the site is on the line between them.

# 15.5<sub>mi</sub>

to a 7.65 GW generation site that is under construction, not announced.

GW Ranch: 8,000 acres, 35 gas turbines, 1.8 GW of battery storage and up to 750 MW of solar. Its TCEQ air permit is the largest issued in the US this year, and three 189,000 sq ft data-center buildings are targeted for December 2026.

---

**7.65 GW**

TCEQ AIR PERMIT, ISSUED JAN 2026

---

**≈\$12B**

ESTIMATED PROJECT INVESTMENT

---

**Dec 2026**

TARGETED COMPLETION, FIRST BUILDINGS

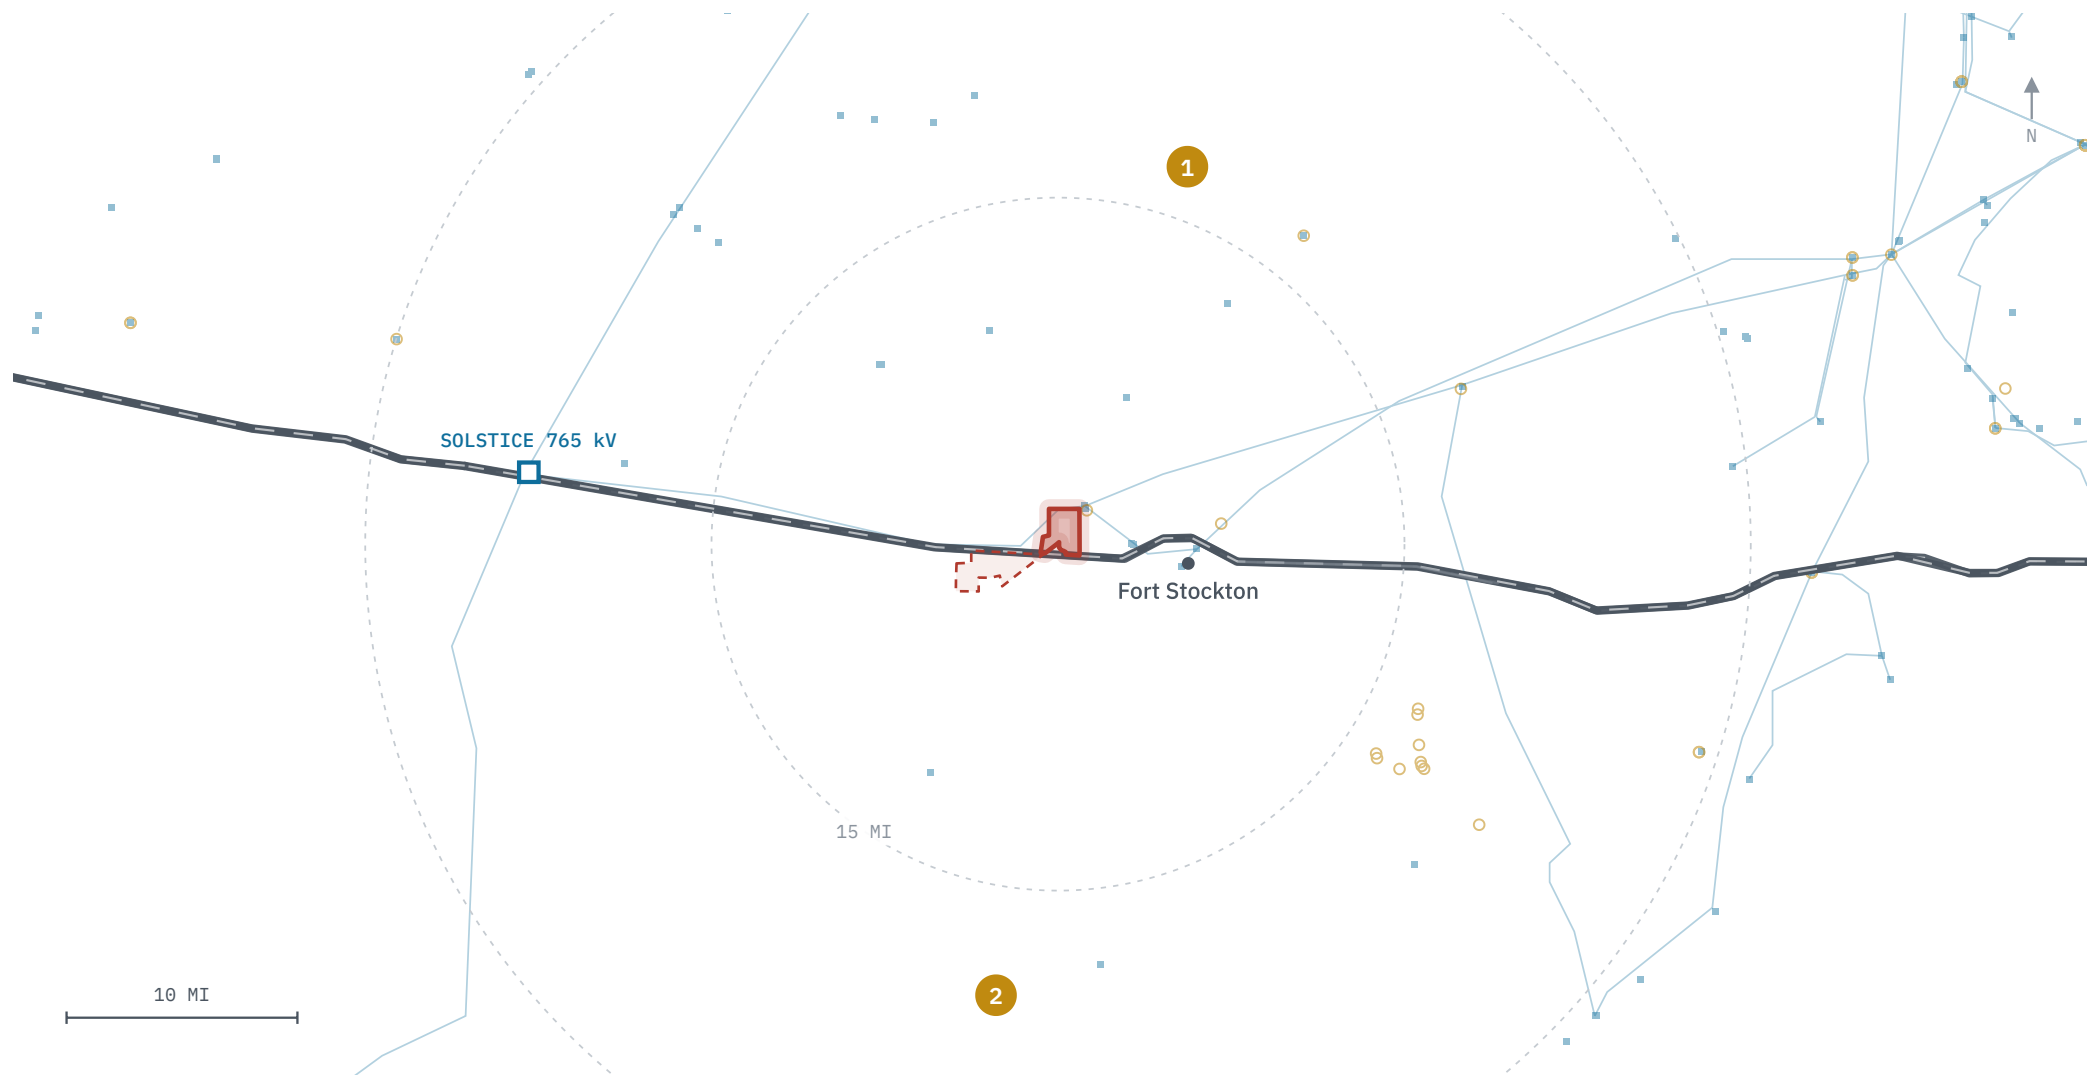

The 7.65 GW figure is a TCEQ generation air permit, not an ERCOT interconnection queue position; the project is off-grid initially and no ERCOT filing has been disclosed. Distance is edge-to-edge from the tract boundary.

# The corridor runs through the property, not past it.

GW Ranch sits 15.5 miles north, Longfellow 19.3 miles south — Caramba North is on the line between them.

- **CARAMBA NORTH** 1,300 acres, I-10 frontage
- **1 GW RANCH** 15.5 mi north, under construction
- **2 LONGFELLOW** 19.3 mi south, phase-1 site work

Markers plot each anchor's disclosed site point; rings are 15 and 30 miles from the tract.

# 79.3%

of nearby announced capacity is already under construction.

Of the 9,650 MW announced at the two campuses within 20 miles, 7,650 MW is being built now; the remaining 20.7% is in planned or phase-1 status.

## Announced capacity within 20 miles, by build status

Share of 9,650 MW combined announced

■ Under construction  
GW Ranch • 7,650 MW

■ Planned / phase 1  
Longfellow • 2,000 MW

# 15<sub>mi</sub>

to the western terminus of all three approved 765 kV Permian import paths.

The transmission decision was made upstream of this site: the PUCT approved the routes on April 24, 2025 (PBRP Docket No. 55718), and they land at Solstice Substation.

**141 + 133**

SUBSTATION AND LINE UPGRADES IN TPIT

TPIT upgrades are the ERCOT-wide queue of planned grid work — pipeline context, not committed capacity.

# 47,418 AF/yr

**already permitted on adjacent affiliated lands — 42.3 MGD.**

That is roughly two-thirds of all Middle Pecos GCD industrial water rights. The water question here is closed, not open.

Source: Edwards-Trinity (Plateau) aquifer; recharge held through the 1950s drought of record.

# 200,000 MMBtu/d

**quoted for a 15-year term at Waha-index pricing.**

The site is 20 miles from the Waha hub and an indicative supply quote is in hand: CIAC of \$15–25M, 9–15 month lead time. Waha's structural discount to Henry Hub — negative prints through 2024–2025 as Matterhorn, Blackcomb, Hugh Brinson and GCX rebalance Permian egress — is the same economics drawing on-site generation into this corridor.

Quote is counterparty-supplied and indicative, not a contract.

# 474<sub>GW</sub>

of pending interconnection requests — enough to stop the queue.

ERCOT's large-load queue went from 63 GW at the end of 2024 to 226 GW in November 2025 to roughly 474 GW by August 2026, about 90% of it data-center driven. On August 3, 2026 the governor directed an audit of queued data centers and the Batch Zero large-load review was paused pending it.

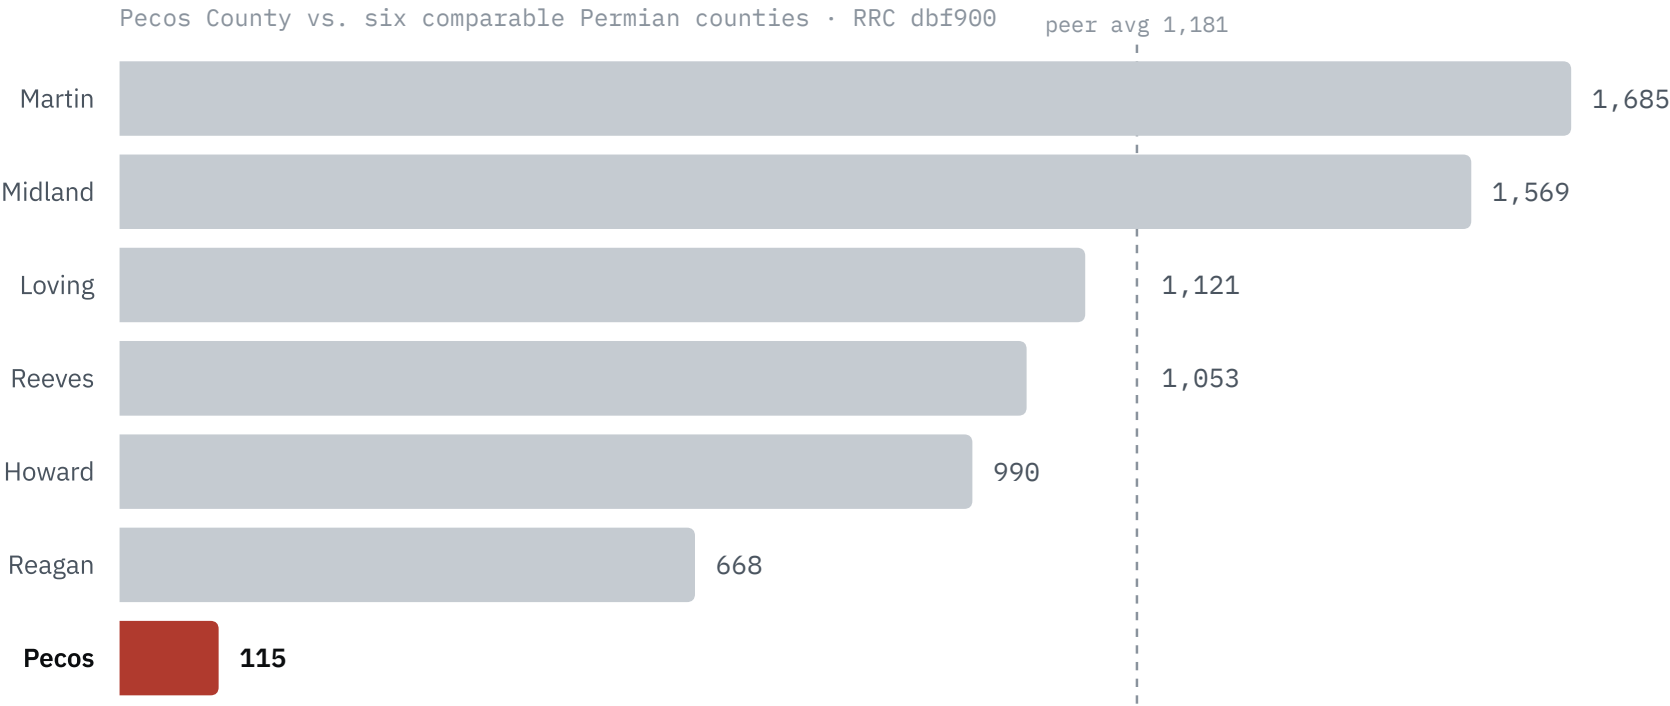

Public reporting: Latitude Media, Dec 3 2025; Utility Dive, Aug 2026.

115

new-drill wells in Pecos County since 2020, against a peer average of 1,181.

The lowest of seven comparable Permian counties, roughly 90% below the peer average — and zero new-drill wells within five miles of the tract.

New-drill wellbore events since 2020

Pecos is the lowest of the seven — roughly 90% below the peer average.

# Every figure in this document is re-derivable from a cited public source.

The underlying GIS platform traces each point, line and boundary to ERCOT, PUCT, EIA-860, TCEQ, RRC, FracFocus, Middle Pecos GCD, HIFLD, USGS, BTS and Census TIGER, with per-feature source popups. RRC refreshes weekly; the ERCOT queue and TPIT monthly. Access is credentialed and logged.

---

## DISTANCE METHODOLOGY

Distances to GW Ranch and Longfellow are measured edge-to-edge: from the nearest point on the Caramba North tract boundary to each site's disclosed location, rather than centroid-to-centroid. This is consistently shorter than a straight centroid measurement because the tract has spatial extent. GW Ranch: 15.5 mi (vs. 17.3 mi centroid). Longfellow: 19.3 mi (vs. 19.7 mi centroid) — Longfellow's own public materials describe its location as more than 25 miles outside Fort Stockton, consistent with the longer figure; this distance should not be represented as shorter.

---

## NOTICES

Confidential offering memorandum prepared for a limited number of prospective counterparties under NDA. Not an offer to sell or a solicitation of an offer to buy securities. Information is preliminary and indicative, drawn from sources believed reliable; public data is drawn from the sources listed above and third-party transaction news is sourced to the public reporting cited in the companion source register.
